

## NAME

Package::Constants - List all constants declared in a package

## SYNOPSIS

```
use Package::Constants;

### list the names of all constants in a given package;
@const = Package::Constants->list( __PACKAGE__ );
@const = Package::Constants->list( 'main' );

### enable debugging output
$Package::Constants::DEBUG = 1;
```

## DESCRIPTION

`Package::Constants` lists all the constants defined in a certain package. This can be useful for, among others, setting up an autogenerated `@EXPORT/@EXPORT_OK` for a `Constants.pm` file.

## CLASS METHODS

**`@const = Package::Constants->list( PACKAGE_NAME );`**

Lists the names of all the constants defined in the provided package.

## GLOBAL VARIABLES

**`$Package::Constants::DEBUG`**

When set to true, prints out debug information to `STDERR` about the package it is inspecting. Helps to identify issues when the results are not as you expect.

Defaults to false.
