Mr J. Noad
Director
Prentice Computer Centre
University of Queensland
ST LUCIA QLD 4072

Dear Sir

CONNECTION OF CITEC RESEARCH AND DEVELOPMENT COMPUTER TO QTINET

The Queensland Government Centre for Information Technology and Communications has a VAX 8530 and associated software donated by Digital Equipment Corporation (Australia) Pty. Ltd. available for Research and Development by interested parties throughout Queensland.

Acceptance of projects to be developed on this machine is controlled by a Steering Committee comprising:

M. Grierson, Director, CITEC;
A. Lister, Professor, Computer Science, University of Queensland;
R. Archibald, Queensland Manager, DEC (Australia); and
R. Starkey, Director, Engineering, DEC (Australia).

The aim of the Queensland Government is that this machine should complement and integrate into the Technology Quadrangle Concept connecting the Universities in South East Queensland.

As a result of the initial Steering Committee Meeting, CITEC formally requests connection of the above machine to the Queensland Tertiary Institutions Network (QTINET), to facilitate terminal connections to the machine by potential users in the statewide academic community.

I look forward to a favourable reply to this request and also to details of the costs involved and the requirements of your organisation for connection to the network.

Yours faithfully

M.J. Grierson
Director
