DATA I/O
Corporation

The 2900 Program

The new standard in affordable device programming.

The new 2900 Programming System programs virtually every programmable logic and memory device on the market—even multiple package types. Its modular architecture allows you to tailor device support options for today's budget. And the 2900 satisfies your programming requirements for many years to come with universal pin driver technology and other innovative features.

Customize your programmer with device libraries. The 2900 offers you a convenient, new approach to on-going support: device libraries. The algorithms have been organized so that you can choose just the device support you need today. As your needs expand, you can add device libraries with simple software updates.

New technology for easy programming of surface-mount devices. The 2900 has greatly simplified handling different device packages. All DIP packages can be programmed from a single socket. PLCCs and LCCs—in all their

variations—can be programmed from a single base. Using Data I/O's ingenious new Matchbook™ carrier technology, all package sizes are accommodated with simple, inexpensive chip carriers. This eliminates the mechanical problems and expense of sockets for surface-mount devices.

All the features you expect in a high-performance programmer, at a price you can afford.

- The universal pin driver technology eliminates pinout adapters and gives you long-term flexibility in device support.
- Floppy disks provide fast and easy device-support updates and local storage of frequently used files.
- 128K standard RAM is expandable to 2MB to accommodate future devices.
- With its flexible interfacing, the 2900 fits easily into any engineering environment.

Device libraries. The standard configuration of the 2900 supports all EPROMs and EEPROMs up to 28 pins. Choose additional libraries to tailor the system to your programming needs.		
Device type	Library	Devices included
Memory	E/EEPROM 28 (standard on all 2900 systems)	All EPROMs and EEPROMs up to 28 pins
Memory	E/EEPROM All	All EPROMs and EEPROMs
Memory	PROM All	All bipolar and CMOS PROMs
Microcontrollers	E-micros All	All microcontrollers with on-board EPROMs
Logic	PLD 24	All PLDs up to 24 pins
Logic	PLD 28	All PLDs up to 28 pins
Logic	PLD 44	All PLDs up to 44 pins

Simple, inexpensive Matchbook carriers replace sockets for surface-mount devices.

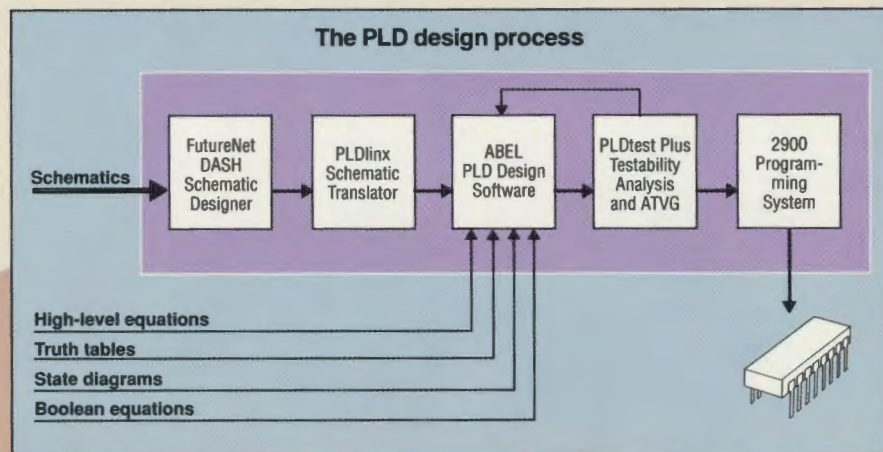

Programming System

Control it from your existing terminal, or from a PC.

- High-speed I/O offers fast uploading and downloading of large data files—up to 115K baud—between the 2900 and your PC. It's up to ten times faster than conventional RS232.
- For RS232 communication, SmartPort™ automatically senses the

protocol of the host, and sets up the 2900 port to match. There are no cables to rewire, no switches to set.

- Job files and macros make setups automatic for frequently used routines.
- Autobaud™ automatically senses the baud rate of the host and sets up the 2900 to send or receive at the correct rate.

Your Personal Silicon Foundry for program-mable logic devices.

Data I/O offers a complete set of complementary tools for your 2900 Programming System. You can create your own Personal Silicon Foundry™: a complete solution for PLD development, from design entry and verification to programming and test.

FutureNet DASH Schematic Designer: industry-standard schematic capture for PLDs. FutureNet® DASH™ makes it easy to move directly from discrete parts to PLDs. It offers fast, smart editing of designs, and hierarchical symbol libraries for full device support. Schematics are transferred via the PLDlinx™ translator directly to ABEL™ PLD Design Software.

ABEL: industry-standard behavioral design entry and verification. Use this high-level language to describe your designs as equations, truth tables or state diagrams. It supports virtually every PLD on the market—the broadest support available.

Device-level verification and superior logic reduction help you create smaller, faster, more testable designs. And the industry-standard JEDEC files allow you to program your PLDs with the 2900.

PLDtest® Plus: for PLD testability and automatic test vector generation. Fault grading capabilities help design engineers evaluate fault coverage, pinpointing areas of the circuit that need redesign to achieve full testability.

For test engineers, PLDtest Plus™ generates a comprehensive set of PLD test vectors for both pre-loadable and non-pre-loadable PLDs. It gives you the highest fault coverage of any automatic test vector generation (ATVG) software.

Software-based system makes updating fast and easy.

DATA I/O
Corporation

A legacy of reliability. The 2900 has been designed for years of high-reliability programming. Manufacturer-approved algorithms give you confidence in the integrity of your programmed parts. High-accuracy programming ensures high yield. And high-quality construction means dependability.

Data I/O set the standard in the industry for design software and programmers — with reliability, device support and value. The 2900 continues in this tradition.

Data I/O is always ready to support you. With a worldwide sales and service network, and comprehensive technical support, Data I/O offers unequalled customer service. Update service agreements assure you of prompt support for new devices and enhancements. With Data I/O, support you can depend on is always just a phone call away.

NEW
2900 Programming System

Out-of-this-world performance at a down-to-earth price.

The new 2900 Programming System brings the cost of high-performance programming down to earth. Buy only the device libraries you need today and expand capability when you need it with simple software updates.

The 2900 supports virtually every programmable logic and memory

device on the market— even surface-mount packages.

Its innovative technology makes programming faster, easier, and more affordable than ever before. And with

Data I/O®'s industry-standard design and testing software, you can create a

complete PLD development solution.

For more than 15 years, Data I/O has set the standard in device programming. Call today to learn how the 2900 is setting a new standard for both price and performance.
