Cover Letter for RSX–11M–PLUS Version 4.6

AV–GJ70K–TC

Version 4.6 is a maintenance release of RSX–11M–PLUS software and documentation that contains several enhancements to make computing with RSX faster and easier. The *RSX–11M–PLUS Release Notes* contain descriptions of the enhancements, a list of new hardware products that are supported in Version 4.6, and corrections to the RSX–11M–PLUS documentation set, including corrections to the *RSX–11M–PLUS System Generation and Installation Guide*.

For information on installing your operating system, please consult the *RSX–11M–PLUS Release Notes* and the *RSX–11M–PLUS System Generation and Installation Guide*.

RL02 PREGENERATED KIT USERS

The Pregenerated RL02 Kit is now included on the tape kit. Be sure to refer to the Release Notes for information regarding this change for the Pregenerated RL02 Kit, and the procedure for restoring this kit to an RL02 pack. This information is located in the Changes to Documentation for the *RSX–11M–PLUS System Generation Guide and Installation Guide*.

For **TK50 and 4mm DAT** tape distributions, there is only one tape. The beginning of the tape contains BRUSYS, followed by the RSX backup sets, the layered product corrections, and finally the pregenned RL02 kit. If an online sysgen is performed, the BRU used to copy the first backup set must support skipping over the bootable BRUSYS image.
