## INTRODUCTION

THIS MANUAL CONTAINS INFORMATION RELATING TO THE DOCUMENTATION SUPPLIED WITH THE AMPL SOFTWARE PACKAGE. THE PART NUMBER FOR EACH COMPONENT IS LISTED AND THESE NUMBERS SHOULD BE USED WHEN MAKING INQUIRIES TO TEXAS INSTRUMENTS ABOUT THESE MATERIALS. THE SOFTWARE SUPPLIED CONTAINS THREE DISKETTES WHICH SUPPORT TWO DISTINCT OPERATING ENVIRONMENTS. ONE DISKETTE SUPPORTS THE USER WITH ONLY 16K WORDS OF MEMORY AND SOFTWARE DEVELOPMENT IS NOT SUPPORTED UNDER THIS SYSTEM. THIS IS THE 733 ASR SYSTEM AND IT IS INTENDED FOR USE BY THE CUSTOMER WHO ALREADY OWNS A TEXAS INSTRUMENTS PROTOTYPING SYSTEM ( ASSUMED TO HAVE A SIX (6) SLOT CHASSIS ) AND WISHES TO UPGRADE TO THE AMPL FUNCTIONS. THE OTHER TWO SYSTEMS (THE AMPL 913 SYSTEM AND THE AMPL 911 SYSTEM) REQUIRE 24K WORDS TO OPERATE AND DO SUPPORT SOFTWARE DEVELOPMENT AS WELL AS AMPL FUNCTIONS. AN OPERATING GUIDE FOR EACH ENVIRONMENT IS SUPPLIED AND THE USER SHOULD CHOOSE THE APPROPRIATE MANUAL AND DISKETTE FOR HIS PARTICULAR REQUIREMENTS. THE SYSTEM OPERATION GUIDE SUPPLIED FOR THE 913/911 SYSTEMS IS DOCUMENTED ASSUMING A 913 AS THE SYSTEM CONSOLE BUT THIS SHOULD NOT CAUSE ANY PROBLEMS IF THE USER KEEPS TWO THINGS IN MIND WHEN USING A 911 TERMINAL (1) ANY REFERENCE TO THE "HELP" KEY IN THE OPERATION GUIDE SHOULD BE THOUGHT OF AS REFERRING TO THE COMMAND ("CMD") KEY ON THE 911 AND (2) THE "UPPER CASE LOCK" KEY ON THE 911 SHOULD ALWAYS BE LOCKED IN THE DOWN POSITION WHEN USING THE AMPL SOFTWARE. ALL OTHER DOCUMENTATION SHOULD BE INDEPENDENT OF THE TYPE OF TERMINAL BEING USED AS THE OPERATOR'S CONSOLE.

THE LIST OF MATERIALS IS AS FOLLOWS:

1. THIS DOCUMENT

- 
2. MODEL 990 COMPUTER AMPL MICROPROCESSOR PROTOTYPING LABORATORY SYSTEM OPERATION GUIDE (USED WITH THE AMPL 913 AND 911 SYSTEMS. SEE 6A, 6B )  
PART NUMBER 946244-9701
-

3. MODEL 990 COMPUTER AMPL MICROPROCESSOR PROTOTYPING  
LABORATORY SYSTEM OPERATION GUIDE (PROTOTYPING SYSTEM  
UPGRADE VERSION)

PART NUMBER 949620-9701

THIS MANUAL IS TO BE USED IN CONJUNCTION WITH THE 733  
AMPL SYSTEM ( SEE 6C )

-----  
4. MODEL 990 COMPUTER AMPL SYSTEM TUTORIAL (USED WITH  
THE AMPL 913/911 SYSTEMS. SEE 6A, 6B)

PART NUMBER 949621-9701

-----  
5. AMPL REFERENCE CARD (USED WITH THE AMPL 913 SYSTEM.  
SEE 6A)

PART NUMBER 946265-9701

-----  
6. 3 DISKETTES

A. 913 VDT SYSTEM DISKETTE

PART NUMBER 939801-9901

THIS DISKETTE CONTAINS AN OPERATING  
SYSTEM WHICH SUPPORTS THE AMPL HARDWARE,  
A 913 VDT CONSOLE AS THE LOG AND A LINE  
PRINTER. ALSO ON THIS DISKETTE ARE ALL  
THE PRE-DEFINED AMPL PROCEDURES

B. 911 VDT SYSTEM DISKETTE

PART NUMBER 939801-9903

SAME AS 6A EXCEPT THAT THE 911 IS  
SUPPORTED AS THE SYSTEM CONSOLE

C. 733 ASR SYSTEM DISKETTE

PART NUMBER 939801-9902

THIS DISKETTE CONTAINS AN AMPL SYSTEM  
WHICH ONLY SUPPORTS A 733 ASR AS THE  
SYSTEM CONSOLE AND ONLY SUPPORTS AMPL  
FUNCTIONS. THIS DISKETTE IS INTENDED AS  
AN UPDATE FOR THE USER WHO ALREADY OWNS  
A PROTOTYPING SYSTEM AND WISHES TO  
UPGRADE TO AMPL FUNCTIONS. IT IS NOT  
POSSIBLE FOR THE USER TO RECREATE THIS  
SYSTEM HIMSELF AND A STANDARD HARDWARE  
CONFIGURATION FOR EACH OF THE SIX SLOTS  
IS ASSUMED AS FOLLOWS:

SLOT 1 THE 990/4 CPU BOARD  
SLOT 2 A 12K(WORDS) MEMORY BOARD  
SLOT 3 A 9900/9980 EMULATOR BOARD  
WIRED TO INTERRUPT LEVEL THREE  
(3)  
SLOT 4 A FLOPPY DISC CONTROLLER  
WIRED TO INTERRUPT LEVEL  
SEVEN(7)  
SLOT 5 AN AMPL LOGIC STATE TRACE  
RECORDER BOARD WIRED TO  
INTERRUPT LEVEL FOUR (4)  
SLOT 6R A 733 ASR HALF SIZE CONTROLLER  
CARD WIRED TO INTERRUPT LEVEL  
SIX (6)

THIS DISKETTE ALSO CONTAINS A SET OF  
AMPL PROCEDURES WHICH ESSENTIALLY ARE A  
SUBSET OF THE PROCS MENTIONED IN STEP  
6A.

-----

A LIST OF THE KNOWN AMPL SYSTEM PROBLEMS MAY ALSO BE  
FOUND IN THIS MANUAL. BE SURE AND READ THIS LIST BEFORE  
ATTEMPTING TO EXECUTE THE AMPL SOFTWARE.

PD, LIST OF MATERIALS FORMAT AND ABBREVIATIONS

The documentation for software packages contains information describing the packaging and use of the software. A key document is the top-level List of Materials (LM) which lists all media and documentation included in the software package. This top-level LM often lists a group of items which is detailed on a separate LM. The collection of LMs, with the top-level first, is always at or near the front of the documentation package, and contains the following information:

1. The part number and revision level of the software package (shown on the top-level LM). It is necessary to have this information available whenever contacting Texas Instruments about the software.
2. The materials that make up the software package.

Items such as cards, cassettes, discs, and manuals are shipped with the package. Paper documents such as program descriptions, listings, and load maps appear in the documentation, in the order listed, following the collection of Lists of Materials. The documentation is distributed as either a collection of documents in a packet or as a bound volume.

It is important to refer to certain parts of the documentation before using the software. The Installation Procedure, for example, contains directions to properly install the software package on a 990 computer system. The Problem Notification contains a list of known problems and patches which should be read and installed as required before the software is used.

REV

SHEET 2

## LM DESCRIPTION ABBREVIATIONS

Almost any item can be called out for shipment on an LM, and a set of abbreviations is used for the most frequently listed items. One group of items consists of various paper documents, all of which are contained in the documentation:

**SP - Software Package**

This is a group of items, and another LM with the specified part number will be found following the top-level LM. All items on this second LM are part of the top-level software package.

**PD - Program Description**

This document contains descriptive information for the software package. It may be, among other things, an Installation Procedure, Problem Notification, Disc Catalog, or Verification Procedure.

**SL - Source Listing**

A listing of the referenced item.

**LML- Load Map Listing**

A load map for the referenced linked module. A List of Materials may be attached to show the part numbers of the individual modules that are used in the link edit.

**AL - Assembly Listing**

An assembly listing for the referenced item.

The second group of items consists of various media on which software is distributed. The abbreviations are:

TEXAS INSTRUMENTS  
INCORPORATED  
DIGITAL SYSTEMS DIVISION  
HOUSTON, TEXAS

A

938972-9901

SHEET 3

REV

CDSO - Card Deck Source/Object

A card deck with both source and object records. It is usually, but not always, a job control stream mixed with object records.

CDS - Card Deck Source

A card deck containing only source statements. This deck could contain job control statements or consist entirely of job control statements.

CDO - Card Deck Object

An object deck as output from a compiler, assembler, or linkage editor. No job control records are included.

CDFL - Card Deck Fully Linked

A fully linked object module as output by a linkage editor. No job control records are included.

CCSO - Cassette Cartridge Source/Object

CCS - Cassette Cartridge Source/Object

CCO - Cassette Cartridge Object

CCFL - Cassette Cartridge Fully Linked

---

The preceding four items have the same meaning as their card deck counterparts, except that they represent cassettes for the 733 ASR terminal.

Most cassettes contain more than one part-numbered file. In this case the top-level LM calls out the cassette as a software package. The part number of the software package is also

TEXAS INSTRUMENTS  
INCORPORATED  
DIGITAL SYSTEMS DIVISION  
HOUSTON, TEXAS

A

938972-9901

SHEET 4

REV

the part number of the cassette, and its contents are listed on the LM with the corresponding part number.

Diskettes are always listed as a software package, with the contents listed on the corresponding LM.

DCO - Disc Cartridge Object

A disc cartridge containing a software package in object form. The disc may contain job control records. It is usually a fully-built system disc.

DCS - Disc Cartridge Source

A disc cartridge containing a software package in source form.

#### REFERENCED ITEMS

Some items listed on a LM have the word "REF", for reference, listed as the quantity. In this case, the line item is used in the manufacturing process but not shipped as part of the software package. For example, an LM for the contents of a cassette or diskette lists card decks as reference items. These card decks are not actually shipped, but are copied to the cassette or diskette as part of the manufacturing process.

A group of media-independent abbreviations can be used to specify the copying of software to a media during the manufacturing process. These abbreviations are always listed as "REF" items. A SRC punched on cards is equivalent to a CDS, a group of SRC and OBJ items copied to cassette is the same as a CDSO, and so forth. The abbreviations are:

SRC - Source  
OBJ - Object  
LIST- Listing  
FLO - Fully Linked Object

## AMPL SYSTEM PROBLEM REPORT

1. IT IS POSSIBLE FOR THE USER TO GENERATE EVENTS FASTER THAN THE OPERATING SYSTEM CAN HANDLE THEM THUS CAUSING THE SYSTEM TO "LOCK UP". THIS GENERALLY HAPPENS WHEN THE EMULATOR OR TRACE MODULE IS SET UP TO INTERRUPT ON AN EVENT BUT NOT STOP (THAT IS, IN A COUNTING MODE). IF AN EVENT IS OCCURRING ON EVERY SAMPLE AN INTERRUPT WILL POSSIBLY BE GENERATED AS OFTEN AS EVERY 10 MICROSECONDS. THE USER SHOULD BE AWARE OF THIS POSSIBILITY AND IF IT HAPPENS THE ONLY RECOURSE IS TO DO A SYSTEM RESTART OR REBOOT.

2. IF THE BUFFER MODULE IS SWITCHED FROM INTERNAL TO EXTERNAL CLOCK OR VICE-VERSA OR AN EXTERNAL CLOCK FAILS THE TMS9900 CHIP IS AUTOMATICALLY POWERED DOWN. -- TO RECOVER FROM THIS THE USER MUST HALT THE EMULATOR AND START IT TO CAUSE THE FLIP-FLOP THAT KEEPS THE POWER OFF TO BE RESET AND POWER TO BE RESTORED TO THE 9900 CHIP. IF THIS FAILS THE ONLY RECOURSE IS TO REBOOT THE SYSTEM AND RELOAD AMPL.

3. THE TARGET 9900 ADDRESS AND DATA BUS ARE USED BY THE HOST SOFTWARE TO FORCE LOAD TRAPS AND TO FETCH INTERNAL REGISTERS WHEN THE EMULATOR IS IN HALT. THE USER SHOULD BE AWARE OF THIS IF HE IS MONITORING THE ADDRESS OR DATA BUS FOR SOME OTHER REASON.

4. THE "DELAY" COUNTER ON THE TEVT COMMAND TO THE TRACE MODULE IS NOT SET UP CORRECTLY BY THE AMPL S/W IN THIS RELEASE. THE DELAY COUNT IS ALWAYS ZERO NO MATTER WHAT IS ENTERED. THIS WILL BE FIXED IN THE NEXT RELEASE OF THE S/W PACKAGE BUT IF THIS IS AN INSURMOUNTABLE PROBLEM TO A PARTICULAR APPLICATION PATCHES TO FIX THE PROBLEM MAY BE OBTAINED THROUGH CUSTOMER SUPPORT.

 SUBSCRIPTION NUMBER 937880-0003  
 UPDATE FROM 11-15-77 TO 1-15-78  
 MEDIA diskette  
 SHEET 1 OF 1

**DESCRIPTION OF CHANGES**

PART CHANGED	DESCRIPTION OF CHANGE	CONTAINED IN PACKAGE
TX/AMPL	Release 2.1 of the TX-AMPL Software Package (Release 1.1 of the Prototyping System upgrade) has been issued, effective 15 January 1978. Refer to the update document (2261788-9901) for details.	937832*D

**LIST OF MATERIALS:**

1. 2261788-9901\*\*Update Document, TX-AMPL, Release 2.1
2. 937872-0003\*D TX-AMPL Software (omit mn1 946265-9701)

This release of the AMPL software package serves three primary functions: (1) Provide emulation support for the TMS9980 microprocessor (2) Enhance the AMPL software functions and (3) Fix all known software problems discovered in the previous release.

The updates to support the TMS9980 emulator are transparent to the user for the most part. Changes were made to the device interface routines for the emulator and very minor changes were made to the AMPL functions to support the operational differences between the 9980 and the 9900 buffer modules.

A new command was added to the AMPL functions to allow the user to exit AMPL, edit a procedure using the TX Text Editor, and return to AMPL without destroying the current operating environment. The ability to enter expressions (as opposed to just constants) on the AMPL Read function was also added. A new set of procedures were added to the AMPL procedure library to simplify setup of the emulator and trace module trace and breakpoint specification. Other minor changes were made to the AMPL system and all are well documented in the the updated users guide.

The "EINT" command was updated to be more reliable in initializing the emulator to some known state particularly after changing the clock source for the microprocessor ( i.e. "internal", or "external"). A problem was also fixed in the target CRU functions which was causing data to be read and written incorrectly. The automatic read after write function check was removed from the AMPL software to allow the user to do memory mapped I/O if he chooses without getting error messages.

The goal of this release is to increase the usefulness and reliability of the AMPL system. Any questions, problems or suggestions concerning the AMPL system should be directed to the Customer Support Staff of TEXAS INSTRUMENTS INCORPORATED.
