Contents

A Word to Parents	vii
Introduction	ix
How to Use This Book	xiii
Level 1: Games for Preschoolers	1
A-Maze-Ing — Children learn coordination by helping a piglet run through an orchard maze.	3
Count the Spots — Children count the spots on a pair of dice and are rewarded with music and flashing colors for correct answers.	7
Counting Game — Children learn to relate, for example, seven objects with the word <i>seven</i> and the number 7.	11
Get the Treasure — Children use a joystick to match shapes and colors on the computer screen.	15
Hidden Picture — A game of coordination in which children use a joystick to uncover a picture.	19
Level 2: Games for Early Readers	25
Matchmaker — A game of memory in which players match hidden shapes.	27
Notecrafter — The player tries to match a note supplied by the computer.	32
Personal Story — Early readers can follow a story about themselves and their lives, amplified with computer sound and graphics.	37
Spelling Bee — Players try to guess words letter by letter before the spelling bee disappears. Several levels of difficulty are supplied to make this game challenging for older students as well as for early readers. Also, instructions are provided for entering words that a child is studying in school. . .	44
Spend Your Allowance — The player is given a monthly allowance and can choose how to spend it. Allowances are increased or decreased depending on spending habits.	49
Word Scramble — The player tries to unscramble words. The score is determined by how quickly words are unscrambled. There are several levels of difficulty to provide a challenge as the player improves.	58

Level 3: Intermediate Games (Grades 6-8)	65
Alphabet Soup — The computer gives 16 random letters to the player. The object is to use as many letters as possible by creating words before the time is up.	67
Lawn Mower — Players learn how to budget money with an imaginary lawn-mowing job.	72
Plan a Menu — Students learn the value of nutrition and the importance of menu selection by choosing sample meals. The computer reports the nutrients and calories in the sample meals, and whether the menu selection is a wise one. ...	78
Stargazer — A picture-and-question game where players learn to identify constellations.	87
State of the Union — A question-and-answer game that teaches students the names of the states, the state capitals, and other important facts.	95
Wise Shopper — Players learn unit-pricing by choosing items in a grocery store.	108
Level 4: Advanced Games (Grades 9-12)	113
Element Man — By guessing one letter at a time, players must figure out the chemical element randomly selected by the computer.	115
Four by Four — A game of memory and speed; players are given categories and asked to give answers based on letters of the alphabet. Instructions are given for parents to program additional categories for individual player needs.	122
Heavenly Bodies — A question-and-answer game that teaches facts about our solar system.	127
Mother Earth — A question-and-answer game on world geography, covering more than 120 countries.	135
Mr. President — Facts about United States presidents, presented in a game. An option to add future presidents is included.	161
Movers and Shakers — Facts about 63 of history's heroes and villains, ranging from Plato to Mussolini, are reviewed in this question-and-answer game.	172
Skeleton — A game naming the bones in the human body. Incorrect answers create a skeleton.	187
Unicorn — A question-and-answer game based on the heroes and heroines of Greek and Roman mythology.	194
Just for Fun When the Homework's Done	207
Asteroid Blast — A game of coordination in which players save a space station from an asteroid cluster.	209

Black Hole — Players pilot a fleet of starships across space, avoiding black holes along the way.	215
Earthworms — Moving worms eat algae and avoid pebbles as they crawl through a subterranean kingdom.	221
Ladybug — A hungry ladybug munches tomato-leaf lunches.	225
Build a Quiz	
Parents can program their own question-and-answer games for any subject, from genealogy to rock stars.	231
Appendix A: A Beginner's Guide to Typing In Programs	239
Appendix B: How to Type In Programs	243
Appendix C: Program Information	
An index of games, further sorted by age of players, by subject, and by memory required	247
Appendix D: Programmer's Notes	
Instructions for modifying many of the game programs included in this book	251
Appendix E: Automatic Proofreader	263

A Word to Parents

Games have long been used to teach. Even the simplest children's games, like tag or hopscotch, teach cooperation, shapes, counting, or other skills. Games make learning fun.

The computer makes that learning even more enjoyable. With its graphics, colors, and sounds, the Commodore 64 can become an excellent tool for learning.

Commodore 64 Games for Kids gives you 30 fully developed games, including a quiz builder you can use to create your own test on any subject. This book places a powerful teaching tool in your child's hands. Game programs that teach such subjects as reading, spelling, geography, and mythology make learning pleasant, not painful.

Divided into four levels, the games are grouped according to age and skills, as well as subject areas. Each game includes detailed and clear explanations of its story, how to play the game, and how to score points. Many of the games can be modified to suit your child's individual needs.

Some of the games contain many questions on a topic. In order to include a vast resource of questions, these programs also contain many DATA statements, which means a lot of typing. Although *you* will have to enter these programs, you'll find the thoroughness of the question-and-answer games well worth the time.

In order to make entering the programs easier, a checksum program is included. Please read the article "Automatic Proof-reader" before typing in any of the programs in this book.

There are even four arcade-style games for your child to play when the homework's done.

Expanding your child's (and perhaps even your own) knowledge with the Commodore 64 becomes easy with *Commodore 64 Games for Kids*. You'll spend many entertaining and educational hours with this book and your Commodore 64 home computer.

Introduction

Guilty Conscience

If you're like most parents, part of the reason you bought your Commodore 64 was to teach your kids. "Computer literacy is the issue of the eighties," you told yourself. "Our kids won't be able to survive in the world if they don't know computers."

Well, that was enough justification for you to buy your Commodore 64, but have you really put the computer to full use as a teaching tool? Perhaps you wrote a couple of simple math games for the kids, but chances are they have been playing *Frogger* ever since.

You don't need to feel guilty any longer. *Commodore 64 Games for Kids* will ease your conscience and teach the kids (and you) at the same time.

What Did You Learn in High School?

For many people, high school was a free ride. The goal was to have fun. If you are like most people, you went to school because you had to go. If you'd had a choice, you'd have gone to school anyway; it was a good place to meet friends. The fact that your teachers were trying to cram knowledge into your head during those few years was incidental.

What do you remember from high school? You remember your friends, the games, and those painful school dances.

You also remember the teachers. You remember Billy's imitation of the way Mr. Berryhill walked and the way Mrs. Thompson came all unhinged when people threw things in class.

But do you remember what those teachers labored to teach you? Do you remember the capitals of more than 5 of the 50 states? When the new Dionysus Greek Restaurant opens downtown, do you know the significance of the name? How many names of the bones of the body or chemical elements can you recall?

If you're like most of us, you forgot all that information because you studied one night to memorize for a test. When the test was over, you let the information slip from your memory. You didn't have any incentive to remember what you'd learned.

Commodore 64 Games for Kids can change all that, at least for children. What they learn playing these games will stay with them. Why? Because they'll have fun learning it. They'll learn the information by playing games they'll want to play.

The Commodore 64 As a Teacher

Computers are a mixed blessing when it comes to teaching. Some features adapt themselves well to a teaching environment, while others may make it frustrating for beginners to use. A programmer can minimize the frustration, but some will always be present.

Computers are good teaching tools because they can utilize sounds, colors, and graphics — features that help hold your attention. Computers also have the ability to present data with a degree of randomness. This reduces boredom and makes learning the same material fun for a longer period of time.

Computers are also well accepted by most children because they represent a comfortable environment. The fact that some games use joysticks further promotes this environment. If you don't tell the kids they're learning while they're having fun, they may never know.

There can be problems though. Your main pipeline to the computer is the keyboard. Although most older children find the keyboard a challenge, some younger children may be intimidated by it. This anxiety can be minimized by using a joystick on games for younger players, or by requiring the younger child to enter only a few characters at the keyboard. The games in this book are written to give young children computer exposure that will encourage, not frighten them.

Another problem in using computers as teaching tools is that the machines are very exact. You may recognize *Misissippi* as a correct answer, but the computer won't. You can minimize this by using multiple-choice answers such as A, B, or C when you create your own games. When creating your own games, if you expect an answer to be typed in, you need to provide a list of possible answers *as the computer will accept them* so the child won't be frustrated by spelling errors. All of the question-and-answer games in *Commodore 64 Games for Kids* do this.

Another possible problem when using computer games is that some of the more complex programs have short delays while tables are loaded and manipulated within the program. This can be alleviated by including a short song that plays while tables are being loaded. You can also reduce the frustration by telling the user a delay will occur. The programs in this book have taken all this into consideration.

Programmer's Guide

A common misconception that has been created by zealous computer salespeople is that you can buy a home computer, unpack it, plug it in, and it will immediately solve all your problems. This is as sensible as buying a power saw and expecting it to build furniture for you. The saw is capable of doing the job, but you must guide it to do the work. A home computer, like the saw, is capable of doing many things — but you must guide it via your program.

Commodore 64 Games for Kids will provide a good set of enjoyable and educational games. And in the process of entering the games into the Commodore 64, you may even learn something about how the programs work. It's just a short step from entering a program to making minor modifications of that program. Once you've made those minor modifications, you're on your way to a knowledge of computer programming.

Acknowledgments

This book is dedicated to Uncle O, without whom it wouldn't have been written, and to the word processor, without which the writing would have been torture.

We would like to thank the following persons who have contributed to the completion of *Commodore 64 Games for Kids*:

Claudia Clark, of the Utah Department of Agriculture, who provided the statistics for "Plan a Menu";

A.J. Smith, who left his sickbed to find us the star charts for "Stargazer"; and

Jack Hart and Jane E. Lindhout, principal and assistant principal of Salt Lake City's East High School, who supplied us with research materials for the question-and-answer games used here.

How to Use This Book

The games in this book are divided into four levels, plus a section of games children can play solely for entertainment. Finally, there's a section featuring a program you can use to make your own computer quizzes. The appendices will give you more tips on what this book contains, how to modify the games to suit your children's individual needs and tastes, and a guide to typing in the programs. It is very important that you read the guide before typing in the games.

The games in this book are divided into four levels:

Level 1 includes games for preschoolers, or children who have not yet learned to read.

Level 2 features games for early readers. First- through fifth-graders will feel most comfortable playing games in this level.

Level 3 games are for kids in upper elementary or junior high school. The games are more sophisticated than those in Level 2, and some are nearly as complex as the Level 4 games.

Level 4 games are for older students. Adults would also be challenged by these games.

Turn to the first game in the Level 1 section, "A-Maze-Ing." At the top of the first page is a section of information for you, the programmer. The first line, Skill Area, tells you what your child can learn by playing this game. All games in *Commodore 64 Games for Kids* teach children something in at least one of six areas:

Coordination (includes shape recognition, color identification, motor skills, and instruction-following)

Language Arts

Mathematics

Memory and Logic

Science

Social Studies

A parent whose child needs help in, say, mathematics, may wish to leaf through the book and pick out the mathematics programs to enter first. Check Appendix C for a breakdown of games according to subject.

The second line, Level, tells which skill or age level(s) would enjoy playing the game. Programs are grouped according to the

earliest level at which a child would enjoy the game. However, most of the games appeal to children of more than one age group. A-Maze-Ing, for instance, appeals to a Level 1 child, but a Level 2 child could also enjoy playing the maze. For a complete grouping of games by age level, see Appendix C.

The third line, Equipment Required, indicates extra equipment that may be required for full enjoyment of the game. (All the programs in this book, of course, require a Commodore 64 and a TV or monitor and a disk drive or datassette to SAVE the programs.) In some games, this line indicates whether a joystick is required for play. If you don't have a joystick, Appendix D will tell you how to adapt each game to play without one.

The final line, Modification, tells you whether the program can easily be changed to suit individual needs. Modification can involve just changing the program from joystick to keyboard control. More often, however, you may want to modify a program to include additional information. The list of United States presidents in "Mr. President" can be updated, for example, and some new elements may be discovered to justify additions to "Element Man." Children's needs have been anticipated here. Programs that can be modified will be listed and instructions will be given in Appendix D.

Look at the rest of the documentation for the game A-Maze-Ing. It's divided into three parts — a scenario, instructions for play, and scoring rules. All the games except the complex question-and-answer games include a scenario to stimulate the child's imagination and his interest in the game. The How to Play and Scoring sections give the mechanics for game play.

Note that for the games in Levels 1 and 2, you will have to read the scenario, instructions, and scoring rules to your child. Younger children are not expected to use the games alone. Of course, this can enhance the learning experience as your child learns alongside you. The scenario would not have to be read word for word, for example, but could be described in a storytelling manner. Children in Levels 3 and 4 can probably understand the games' documentation, although they may need some interpretation from you.

You will have to do the majority of the typing as you enter each program, especially with the games in the first two levels. Young children can get easily frustrated as their errors multiply. Children in Levels 3 and 4 could try to enter the programs if they wish, perhaps after watching you, or if they already have had

some experience with personal computers.

All the documentation for *Commodore 64 Games for Kids* follows the format explained above. Even the games in the "Just for Fun When the Homework's Done" section teach coordination and quick thinking and can thus be loosely construed as educational games.

The only exception is "Build a Quiz," a program for parents. In this section, you can create your own question-and-answer games or tests, using a skeleton program.

**Level 1: Games
for Preschoolers**

A-Maze-Ing

Skill area: Coordination

Level: 1, 2

Equipment required: Joystick

Modification: Yes

Story of the Orchard

You are a piglet in the orchard. Piglets like food, and orchards are full of apples, so you've escaped from your pen and run toward the trees. Farmer Brown is following close behind, so you have two minutes to eat all the apples you can before Farmer Brown catches you.

Some of the apples may be out of reach. Don't worry about them. Just eat all the apples you can before you have to leave the orchard.

How to Play

"A-Maze-Ing" is a game of coordination and speed. Using the joystick, you move through the maze to find the apples. You have two minutes to eat all the apples you can. If you've eaten all the apples that aren't hidden by dead ends of the maze, you can end the game by pressing f1.

There are 25 apples. Each time you eat an apple, you'll hear a *Gulp!* sound, and the background color of the orchard will change. When you've eaten all the apples, a song will play.

Scoring

At the end of the game, your score will tell you how many apples you ate, as well as the percentage of the 25 apples that you ate. You will also see how long it took you to eat all the apples within reach.

If you're a good piglet, you'll soon be able to eat all the apples in the orchard, unless one or two are hidden by the orchard maze. When you get that good, try to see how much faster you can do it. If you're fast enough to eat all the apples in two minutes, see if you can move like a greased pig and eat all of them in one minute.

Count the Spots

Skill area: Mathematics

Level: 1

Equipment required: None

Modification: No

The Old *Monopoly* Dice

All the big kids play *Monopoly*, but you can't get anybody to play it with you. *Monopoly* isn't easy, and Dad says you have to be able to roll the dice before you can learn the rest of the game.

Rolling the dice isn't hard, unless a die rolls off the table and you have to look for it in the carpet. The hardest part is deciding what the spots on the dice mean. Each spot stands for the number 1, and you add the number of spots on both dice to see how many squares you can move ahead when your turn comes. When you can count the numbers on the dice, maybe the other kids will let you play *Monopoly* with them.

How to Play

Each game consists of ten rolls of the dice. The computer will roll the dice, and you count the number of spots. When you think you have the right number, type the number and then press the key that says RETURN. *Don't* spell the numbers out: type 10, not TEN.

You'll know when you get a right answer by the whooshing sound and the colors flashing on the screen. A wrong guess will cause the screen to go black, and you'll hear a raspberry.

Scoring

At the end of the game, the computer will tell how many times you were right. The highest score possible in one game is 10. The computer will also tell the highest score that you've made since you started playing "Count the Spots" this time. After a game, type the letter Y to play again. To quit, type N when the computer asks if you want to play once more.

Count the Spots

Remember, do not type the checksum number at the end of each line. For example, do not type ".rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

Counting Game

Skill area: Mathematics

Level: 1, 2

Equipment required: None

Modification: No

The Counting House

You, the king, are in the counting house. The counting house is full of hearts, spades, triangles, and other shapes, which you've collected to decorate the kingdom. An accurate count of each shape must be made.

How to Play

This game teaches a child to recognize the written and numeric characters from 1 to 99. Each number picked is shown as a word and also as a number of objects. For example, the word *four*, followed by a picture of four hearts, might appear. Look at the pictures and the word and then enter the correct number on the keyboard (in this case, 4).

Because people learn to count a little bit at a time, the level of difficulty can be adjusted when entering the maximum value at the beginning of the game. Beginning counters, for example, could choose a maximum of 10, and the largest number of objects presented in any question would be 10. The number of questions that will be asked can also be selected. To choose any number in these categories, type the number and then press the RETURN key.

When the word and the corresponding number of objects appear on the screen, type the number on the keyboard, then press the RETURN key. Correct answers will be rewarded with songs; incorrect answers will be noted with a buzzing noise and a black screen.

Scoring

The score at the end of the game will tell you how many questions were asked, how many items were answered correctly, and the percentage of correct answers.

Get the Treasure

Skill area: Coordination

Level: 1

Equipment required: Joystick

Modification: Yes

The Treasure Chest

You have a treasure chest, but it's empty. The genie who gave you the treasure chest said he would help you fill it, but only if his instructions are followed. In fact, there is a whole field full of treasures you may have if they are collected in the right order.

How to Play

The computer will scatter ten treasures, geometric shapes of various colors, around the screen. Using a joystick, move the cursor to the treasure indicated at the top of the screen. When the cursor touches a treasure, the treasure will be moved to the chest at the foot of the screen.

In addition to teaching coordination (use of the joystick) and shape recognition, "Get the Treasure" teaches you to match colors. If the item to find is a blue heart, for example, the heart you touch must also be a blue one. A red one or a purple one won't do.

If you pick the right treasure, a musical tone will indicate that you've made a correct choice. Picking the wrong treasure will produce a buzzing sound.

Scoring

At the end of the game, you will be told how many errors were made and how many seconds it took you to get all ten treasures into the treasure chest. You'll always win Get the Treasure — that is, always get all ten treasures unless you quit playing in mid-game. However, the score and your coordination can be improved by trying to reach all ten treasures in a shorter time period. This is the true object of the game.

Get the Treasure

Remember, do not type the checksum number at the end of each line. For example, do not type ":rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

Hidden Picture

Skill area: Coordination

Level: 1

Equipment required: Joystick

Modification: Yes

The Magic Show

You're a famous magician, and you've learned how to take an empty canvas and turn it into a picture without doing any work at all. Artists would like to know your secret, so they could paint pictures without messing up their living rooms with sticky paint. They ask you to tell them how to uncover hidden pictures, but the secret is not for sale. Your magic is done for free, and just for friends.

How to Play

This game of coordination requires only a joystick and a little patience. The computer will print a picture on the screen, camouflaged in the same color as the background of the screen. Try to uncover the picture by moving the cursor back and forth with a joystick to erase the background. A song will play to indicate the game is over once every square in the picture field is uncovered.

There are five pictures entered into the basic program. If you uncover part of a picture and realize you've seen it before, you can press the fire button on the joystick to get a new picture.

Hidden Picture

Remember, do not type the checksum number at the end of each line. For example, do not type ":rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

**Level 2: Games for
Early Readers**

Matchmaker

Skill area: Memory and Logic

Level: 2, 3, 4

Equipment required: Joystick

Modification: No

The Matchmaker

You're the kingdom's foremost matchmaker, and you've been hired by the king to keep him distracted from the problems he faces from day to day. The king's favorite pastime is throwing things on the floor. Then he calls you, the matchmaker, to pick everything up.

Being an eccentric king, he doesn't want to make things easy for you. He has a rule: Whatever he throws on the floor must be picked up with an object that matches. Today he's scattered a bunch of flat objects on the floor and covered them with paper to hide their shapes. You have to remove all the objects, pair by pair. If you want, you can get others to help you.

How to Play

"Matchmaker" is a game for one to eight players, with four skill levels. Each player must uncover two squares and try to match the shapes underneath them. When playing in skill levels 2, 3, or 4, you must also match the *color* of the objects.

To begin the game, press number 1, 2, 3, or 4 to indicate the skill level. The higher the number, the more objects will have to be matched. Next, press a number from 1 to 8 to indicate how many people are playing. The computer will take a few seconds to build the Matchmaker screen.

Notice that the top of the screen will indicate two things. First, it will tell whose turn it is. Second, it will indicate whether this is your first or second choice during a turn. When the game begins, the top of the screen will tell you player #1 is about to ask his first question.

To uncover a square, use the joystick to move the arrow directly underneath it. When you are in the right position, press the fire button. (Important: Hold down the fire button as long as you need to remember what's underneath the square, but don't press it a second time in the same location or it'll count as your

Level

2

next guess. This is particularly crucial when you're playing with more than one person. If you press the fire button a second time on your second turn, it'll count as the next player's first guess.)

When you make a match, a whooping noise will sound and the matched squares will disappear.

Scoring

Matchmaker is not a game of high points. The total number of points is the number of pairs of objects in the game. If only one person is playing and there are 20 pairs of objects on the board, the score at the end will always be 20 unless the game is stopped in the middle. If more than one person is playing Matchmaker, the final score will tell how many matches were made by each player.

Matchmaker

Remember, do not type the checksum number at the end of each line. For example, do not type "rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

Notecrafter

Skill area: Memory and Logic

Level: 2, 3, 4

Equipment required: None

Modification: No

The Notecrafter's Craft

You are a notecrafter. If the orchestra gives a bad concert, the newspaper critic will blame the conductor, and the conductor will blame you. It's your job to make the orchestra sound good by getting the instruments to sound just right.

So that you can tune the instruments, the computer will tell just how a note should sound. Then it's your responsibility to get the note made by the musical instrument to sound just like the computer's note. It takes talent — a good memory and a good musical ear — to get a note exactly right.

How to Play

The computer will sound a note. Then it will play the note made by your musical instrument. You must raise or lower the note until it sounds exactly the same as the note you remember from the computer.

Raise or lower a note by pressing numbers on the computer keyboard.

To make a note sound lower, press 1, 2, or 3:

- 1 = lower the note just a little bit.
- 2 = lower the note an average amount.
- 3 = lower the note a lot.

To make a note sound higher, press 7, 8, or 9:

- 7 = raise the note a little bit.
- 8 = raise the note an average amount.
- 9 = raise the note a lot.

The sound of your note can be changed as many times as necessary. When you think the note sounds the same as the computer's note, press 5 to indicate the note matches.

Scoring

When you press 5, the computer will play its note and then play

the note you picked. If the notes are exactly the same, you will be rewarded with music and flashing lights.

Don't be surprised if your note doesn't exactly match the computer's note. Very few people have what is known as perfect pitch. If your note doesn't match the computer's note, the computer will tell you how close you came to matching it. If you get a perfect match, you're 100 percent correct.

The computer will look at the score and tell you whether your ear for music is *not bad*, *normal*, *above average*, *good*, *very good*, or *excellent*. If your guess is very far off, the computer may not tell you anything. If this happens, try again.

If you don't get the note exactly right, or even close to it, don't give up. Music is like everything else. You certainly need talent, but practice is just as important.

Notecrafter

Remember, do not type the checksum number at the end of each line. For example, do not type ":rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

Personal Story

Skill area: Language Arts
Level: 2
Equipment required: None
Modification: Yes

The Personal Story

We all like to hear about ourselves, and children are no exception. In fact, children are especially impressed to see their names and their life stories in print. Children's book companies have made thousands of dollars on the premise that children will learn to read faster if they read stories about themselves.

"Personal Story" is programmed with this in mind, but it really isn't a game for the child to play. Other than pressing a key on the computer keyboard to continue the story, the child has no input except reading along with the words, delighting in the story, and perhaps increasing his or her reading skills.

How to Play

Before your child sits down with this game, you need to enter the data for nine variables. Only then will the game tell a personalized story.

As you type in the program, you can enter your child's personal data in lines 10000-10100, or if you entered the program as it's listed here, you can change it by LISTing these lines, then insert your own information. (Be sure the word DATA follows the line number and that the information has quotation marks.)

The lines and information needed are:

- 10000 Enter the child's first name.
- 10010 Enter the child's last name.
- 10020 Enter BOY or GIRL.
- 10030 Enter HE or SHE.
- 10040 Enter the child's age.
- 10050 Enter the child's birthday — a month and date, for example, MAY 3RD.
- 10060 Enter the child's street address.
- 10070 Enter the child's city of residence.
- 10080 Enter the first name of a good friend of the child.

Level

2

10090 Enter the child's phone number.

10100 Enter the name of the child's favorite toy.

You may want to enlist the child's help, or you may want to program the game as a surprise.

Personal Story

Remember, do not type the checksum number at the end of each line. For example, do not type ":rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

Spelling Bee

Skill area: Language Arts

Level: 2, 3, 4

Equipment required: None

Modification: Yes

The Mighty Bee

If there's such a thing as a guardian angel of spelling, the spelling bee is it. As long as you're doing a good job at your spelling, she'll stay around and watch you. If you don't do well, though, she'll lose strength and slowly disappear. The object of "Spelling Bee" is to guess the letters of words the bee gives you before she disappears. If you guess a word correctly, she'll return in all her glory for the next one.

How to Play

The computer will pick a word and tell you how many letters it contains. You must guess the word by selecting a letter at a time. If you pick more than 11 incorrect letters, the spelling bee will disappear.

To begin play, choose a skill level as listed below:

- 1 = Beginner
- 2 = Intermediate
- 3 = Advanced

Press the appropriate number and the game begins. A line of blank spaces appears on the screen. Each blank indicates a letter in the word. You should type a letter you think may be in the word.

When you type a letter, one of two things will happen. If the letter belongs in the word, it will appear in the right space. If it does not belong in the word, the bee will buzz, the screen will temporarily go black, and the letter will appear on the bottom of the screen. Each time you make an incorrect guess, a little bit of the spelling bee will disappear. If you guess 11 incorrect letters, the correct word will appear. But the spelling bee will be gone — until the next round.

Scoring

No point score is given in Spelling Bee. Either the correct word is

guessed by the player, or it isn't. At the end of a round, the computer will ask if you want to play again. If you indicate you do not want to play again, the computer will tell you how many words were guessed correctly. Then the computer will tell you how many words you missed.

Spelling Bee

Remember, do not type the checksum number at the end of each line. For example, do not type "":rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

Spend Your Allowance

Skill area: Mathematics
Level: 2, 3, 4
Equipment required: None
Modification: Yes

A Monthly Income

Your parents have decided to give you an allowance of \$10 each month. Ten dollars sounded like a fortune at first, but the world is full of exciting things to buy. If you spend wisely, your allowance will be increased. What does *wisely* mean? How can your parents know whether buying a hamster or going to the movies is important to you? You'll have to spend your money the best way you can. If you spend your money unwisely, however, they may deduct a dollar from your monthly income.

"Spend Your Allowance" is full of situations that suddenly pop up. You may have to buy a birthday present, or you may be able to pick up some money doing chores around the house. When you get any extra money, keep it if you wish, or spend it if there's something you'd like to buy. It's your money.

How to Play

A game consists of 12 months, with four spending decisions each month. The computer will ask you to buy one of three items. Sometimes you'll see two or three items you'd like to have. Other times, nothing will look very appealing. In any case, choose the item you'd most like to purchase. Indicate your choice by pressing the number 1, 2, or 3.

Every month the computer will tell you how much money you have at the end of the month, how much your allowance is for next month, and what your total amount on hand is. For example, if your first month's allowance is \$10, and you spend \$12, you will have a balance of $-\$2$ at the end of January, but your \$10 allowance will bring your total amount on hand to \$8 for February. Random events throughout the game may increase or decrease that amount.

Level

2

If you spend wisely in any month, you may hear a musical signal at the beginning of the following month, along with the news that your allowance has been increased. Your allowance can be increased only \$1 at a time, but it can be raised as many months in the year as your parents choose. Remember that unwise spending may cause your parents to reduce your allowance by a dollar per month.

Scoring

At the end of the game the computer will tell you how much your monthly allowance was and how much you had on hand at the end of the year. You will then be given three options:

Press 1 to start the game over. Your allowance will be \$10, just as it was at the beginning of the last game.

Press 2 to continue the game that you just finished. Because this is just a continuation, January will be considered the first month of the next year. You can play Spend Your Allowance for as many game years as you want, and your ending allowance can be astronomical if you spend your money wisely.

Press 3 to end the game.

Note to Parents

Do you want to use this game to teach your children to spend their money wisely? Appendix D describes the technique used by this program to determine if the monthly allowance should be raised or lowered. Changes to this program can easily be made by referring to Appendix D.

Spend Your Allowance

Remember, do not type the checksum number at the end of each line. For example, do not type ":rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

Word Scramble

Skill area: Language Arts

Level: 2, 3, 4

Equipment required: None

Modification: Yes

A Long Night and Tired Eyes

It's one of those nights. There's a super triple feature on television — three monster movies, back-to-back. You should do your homework, but you just *have* to find out if the cockroach really does eat Cincinnati.

By the time the third feature ends, your eyes are almost shut. You hit the pillow and fall asleep in 43 seconds. Two minutes later, you sit straight up in bed. Miss Zane, your English teacher, is yelling at you in your mind. You've just remembered the big exam tomorrow. And you spent the evening watching cockroaches dine on Cincinnati!

There's nothing to do but get out of bed and study for that exam. Miss Zane is no easy teacher, and if you flunk the exam you'll be grounded until four years from next Saturday. But your eyes don't seem to care. Every time you try to read a word, your eyes play tricks on you. All the words are jumbled up. If you don't unjumble those words quickly, you're going to be in big trouble tomorrow morning.

How to Play

"Word Scramble" is geared to three different skill levels. Level 1 is for beginners. Level 2 contains words of five or six letters. Level 3 contains words of seven to nine letters. Press the number of the level you want, then hit the RETURN key to start the game.

The computer will show you a word with its letters scrambled. Type the correct word on the computer keyboard and press the RETURN key to enter it. A correct answer will be rewarded with music and colored lights. An incorrect answer will be greeted with a buzz. You can guess as many times as you want, or you can skip a tough word by pressing the f1 key. If you press the f1 key, the computer will unscramble the word and display the correct answer. Unscramble as many words as you can in the two-minute time limit.

Scoring

You'll receive five points for each word you correctly unscramble. One point will be deducted from your score for each incorrect guess. There are 50 words in each level of difficulty, so the ideal high score would be 250 points. That total is very difficult to reach. But if you're really good at Word Scramble, you'll pass Miss Zane's test.

Word Scramble

Remember, do not type the checksum number at the end of each line. For example, do not type ":rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

Alphabet Soup

Skill area: Language Arts

Level: 3, 4

Equipment required: None

Modification: No

Lunchtime

It's lunchtime again, and the only thing to eat in the house is alphabet soup. Alphabet soup isn't a bad lunch — if you like soup, that is. But the good thing about alphabet soup isn't the taste. The good thing is that letters float up from the bottom of the bowl and bob around on the top with the peas and the carrots. If you don't have anything better to do, you can make all sorts of nifty words with the letters.

How to Play

Today it's okay to play with your food. Sixteen letters float up to the top in your bowl of alphabet soup. See how many words of 2 letters or more you can make with those 16 letters.

When you see a word in the line of letters, type it on the computer keyboard. If you decide you don't like a word you typed, type the symbol @, followed by the word. For example, if you've entered the word *zero* and decide you'd rather spell *zebra*, type "@zero" to make *zero* disappear. The letters Z, E, R, and O will return to the soupbowl, and you can use them again.

Before the game starts, you can decide how long you want the game to last. If you're quick, make the time limit a minute. If you'd rather concentrate on getting beautiful words than on spelling words quickly, choose a longer playing time. If you've used all the letters you can and the time still isn't up, press f1 to end a round early.

At the end of a game, you can press Y or N, indicating whether or not you want to play again. If you want to play again but would like to select a different time limit, press R to reset the time.

Scoring

The score is based on the word length and value of the letters in the word. A six-letter word, for example, is going to be worth

Level

3

much more than three two-letter words.

At the top of the soupbowl are the 16 letters you'll be using in the round. Underneath each letter is a number. Letters that are harder to use — Q, X, Z, and some others — are worth more points than letters you can use anywhere. Try to use those big letters first.

The computer does not check to see if a word is spelled correctly, or even if it *is* a word, so you'll have to be honest.

At the end of the game, your score will appear. Each word you created will be printed together with the point value for that word. Then you'll see your total score. Your score will depend a little bit on which letters float to the top of the soupbowl, but your final score will depend most on how good you are at making words with your food.

Alphabet Soup

Remember, do not type the checksum number at the end of each line. For example, do not type ":rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

Lawn Mower

Skill area: Mathematics

Level: 3, 4

Equipment required: None

Modification: No

The Summer Job

Dad's decided the time has come to teach you a little responsibility. This summer, you won't get an allowance. You're going to enter the world of high finance instead.

Your job is to mow lawns in the neighborhood. Dad will let you use his power mower, and he'll lend you \$15 to get your business started. The rest is up to you.

You'll get \$5 for each lawn mowed, but you're responsible for buying supplies. You have to buy gasoline, oil, and plastic bags. And once in a while, the lawn mower blades must be sharpened. The \$15 Dad loaned you is for supplies.

How to Play

At the beginning of the summer, and again at the start of each month, the computer will ask you what supplies you want. You may purchase 0 to 9 gallons of gasoline, at the current price. You'll also be asked how much oil and how many leaf bags you want to buy. Again, choose a number from 0 to 9. Finally, you need to decide whether you want to have the lawn mower blades sharpened. The lawn mower can't run forever on dull blades.

Once you've purchased your supplies, it's time to start mowing lawns. You can mow as many lawns per month as you have supplies, but once you run out of gas or oil or plastic bags, or your lawn mower blades get dull, you can't mow any more lawns for the rest of the month. Buy your supplies wisely. Wait for a good price on something before you stock up, but make sure you don't run out. If you do, it's going to be a long summer.

Watch the screen to see your progress. You'll hear the sound of the lawn mower as the grass is mowed. When each lawn is mowed, the computer will give a running tally of how many gallons of gasoline you have left, how much oil you have in reserve, and how many plastic bags you have on hand. Keep this tally in mind when you're purchasing supplies next month. After all, you don't want to end the year with 256 plastic trash bags!

Scoring

At the end of the summer, you'll find out your cash balance and your balance after paying Dad his \$15.

Lawn Mower

Plan a Menu

Skill area: Science

Level: 3, 4

Equipment required: None

Modification: Yes

Making Meals

"Plan a Menu" lets you pick a sample meal. Then the computer tells you how nutritious the meal is and how much weight you would gain or lose by following such a meal-planning strategy all the time.

How to Play

The game begins by asking for your sex and your age. Indicate the proper answer by typing M, F, or the numerical age. Press the RETURN key to enter the information.

Next will appear a number of foods from six different food categories: main courses, vegetables, fruits, breads, drinks, and desserts. Category by category, choose the foods you would pick for a sample meal. Make your selections by typing the letter that appears to the left of the item. To move to another category, press the letter Z.

Choose as many items from a particular category as you wish. If nothing in a category looks appealing, by-pass the category altogether by pressing Z.

When the sample menu is complete, the computer will analyze it to see what quantities of the following items it contains:

calories	riboflavin
protein	niacin
vitamin A	calcium
vitamin C	iron
thiamin	

The computer multiplies all totals by 3 to indicate what percent of the minimum daily requirements of those calories or nutrients you would get if you ate three similar meals in a day. The percentage total for each item will be printed next to its name.

Scoring

Each sample meal is rated according to the number of calories it

contains and the amount of nutrients found in the chosen foods. The computer rates each meal fair, average, good, very good, or excellent.

Each meal also is evaluated to tell you how many pounds per week you would gain or lose if all your meals contained the same number of calories as the sample meal. The calorie count applies to an average-sized person whose metabolism burns food at a normal rate. Overweight or underweight players should take this into account and use calorie charts, not Plan a Menu, to determine how many calories they should consume.

Plan a Menu

Remember, do not type the checksum number at the end of each line. For example, do not type ":rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

Stargazer

Skill area: Science

Level: 3, 4

Equipment required: None

Modification: Yes

The Stargazer

You are the emperor's stargazer. The emperor expects you to foretell the future by looking at the constellations. He also wants you to predict the weather by peering at the stars.

As far as you know, you can't predict the future from the stars. And the only way the constellations can give you a weather report is if you can't see them because of the clouds. But the emperor wants a stargazer, and you've learned some things from watching the sky. Each constellation has its own history, and people like to have you tell them about it.

If you hope to keep your high-paying job with the emperor, the least you can do is know where the constellations are. Also, you should know something about each one so you can impress the emperor with your knowledge.

How to Play

The computer will present one of 32 constellations and ask for its name. Because constellations change position as the seasons progress, the picture will be the one that best represents the constellation as seen from the ground. The computer will also state what month the constellation looks like this, as well as telling which direction you have to look if you're in North America.

Look at the constellation and see if you can determine its name from its shape. If you can, type the name of the constellation on the computer keyboard and press RETURN. If you aren't sure, make a guess or hit the RETURN key.

If you can't guess the name of the constellation by its shape alone, the computer will give you a clue that may help you identify the constellation. If the clue helps, type the answer on the keyboard.

Since the computer will count any misspelled name as a wrong answer, refer to this list of the 32 constellations used in "Stargazer":

Level

3

Andromeda	Cassiopeia	Hercules	Pisces
Aquarius	Cepheus	Hydra	Sagittarius
Aquila	Cetus	Leo	Scorpius
Aries	Corona Borealis	Lepus	Serpens
Bootes	Cygnus	Libra	Taurus
Cancer	Draco	Orion	Ursa Major
Canis Major	Eridanus	Pegasus	Ursa Minor
Capricornus	Gemini	Perseus	Virgo

If you still can't guess the constellation after receiving a clue, press RETURN and the computer will tell you the name of the constellation and let you look at its star pattern and name for a few seconds. Then the computer will give you another constellation to guess.

You can quit playing at any time by entering END on the keyboard. Your percentage score will not be affected if you quit before all questions have been asked.

Scoring

You'll receive 10 points for each constellation you guess by its shape alone, and 2 points for each constellation name you guess after getting a clue from the computer.

Your score will be given in two areas: the number of points, which will appear in the Total Points category, and a Percentage Score.

If you don't do well the first time, try again. Remember, it took thousands of years for ancient societies to spot constellations in the sky and develop stories about each one.

Stargazer

Remember, do not type the checksum number at the end of each line. For example, do not type ":rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

State of the Union

Skill area: Social Studies

Level: 3, 4

Equipment required: None

Modification: Yes

“State of the Union” is a question-and-answer game designed to teach the names of the 50 states, their capitals, locations, and various facts about each state’s history or economics. The object is to see how quickly you can identify the state from the questions asked.

How to Play

To begin the game, hit any key. There is about a ten-second delay between the time you hit the key and the time the game begins.

When a question is asked, type the name of the state on the keyboard and hit RETURN. If you don’t know the answer to the question, you can either make a guess or hit the RETURN key. Abbreviations and misspellings will count as incorrect answers, so you must correctly spell the full name of the state. For your reference, the correct spellings of the state names appear below:

Alabama	Louisiana	Ohio
Alaska	Maine	Oklahoma
Arizona	Maryland	Oregon
Arkansas	Massachusetts	Pennsylvania
California	Michigan	Rhode Island
Colorado	Minnesota	South Carolina
Connecticut	Mississippi	South Dakota
Delaware	Missouri	Tennessee
Florida	Montana	Texas
Georgia	Nebraska	Utah
Hawaii	Nevada	Vermont
Idaho	New Hampshire	Virginia
Illinois	New Jersey	Washington
Indiana	New Mexico	West Virginia
Iowa	New York	Wisconsin
Kansas	North Carolina	Wyoming
Kentucky	North Dakota	

Level

3

If you are still unable to name a state after the first four questions, a map of the continental United States will be shown, with the state in question indicated. Your final question will be to identify the state from its location.

If you are still unable to identify the state after seeing its location on the map, the name of the state will flash on the screen.

If you want to quit the game early, type END in the place of any answer. Your percentage score will not be affected by your decision to quit playing before all questions are asked.

Scoring

If you answer correctly after only one question, 5 points.

If you answer after the second question, 4 points.

If you answer after the third question, 3 points.

If you answer after the fourth question, 2 points.

If you answer after seeing the location of the state on the map, 1 point.

If you are still unable to guess the name of the state, -5 points.

Scoring is determined by the number of points you receive, and that number is shown at the end of the game. You will also receive a percentage score to let you know how well you've done.

State of the Union

Remember, do not type the checksum number at the end of each line. For example, do not type ":rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

Skill area: Mathematics

Level: 3, 4

Equipment required: None

Modification: Yes

Money Talks

You had the day all planned. You were going to spend the morning playing with the computer, and you wanted to goof around with your friends in the afternoon. After dark, you hoped to borrow enough money from mom to go to the movies.

Mom has different ideas. She wants you to go to the grocery store. The list isn't a long one — it's just ten items. But going to the store isn't exactly the way you wanted to spend your day.

But mom offers a compromise. She'll give you the money and the grocery list. You go to the grocery store and buy everything she needs. Any money you save by shopping wisely, you get to keep for your night at the movies.

The idea still doesn't sound as good as spending the day with your computer and hanging around with the kids, but it beats missing the movie altogether.

How to Play

The computer will show you a selection of ten items. Each time you need to make a purchase, you may choose between Brand A and Brand B. Select the brand you think is the better bargain by pressing A or B. Each time you choose the better buy the computer will let you know with sound and flashing colors. If you make a mistake, the computer screen will go black and you'll get a raspberry.

Scoring

At the end of each game, the computer will tell you the number of wise purchases you made, followed by the number of unwise choices. Then the computer will tell you how much you saved by comparison shopping.

Wise Shopper

Remember, do not type the checksum number at the end of each line. For example, do not type ":rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

Element Man

Skill area: Science

Level: 4

Equipment required: None

Modification: Yes

The Formidable Element Man

They say everything in the world is made up of elements. The Element Man is no exception. Even though he's made of the same stuff as you and I, the Element Man is not very nice. He's not exactly the kind of guy you'd invite to a party.

Two things are true about the Element Man: He knows where he's not wanted; and he'll do his best to be there anyway. But if you know your elements, you can keep him off your doorstep.

How to Play

The computer will pick the name of a chemical element, tell how many letters it contains, its atomic number and its symbol. You must guess the element by selecting one letter at a time. If you pick more than 11 incorrect letters, the Element Man will follow you around for the rest of the week.

After you type a letter and press RETURN, one of two things will happen. If the letter belongs in the name of this particular element, it will appear in its proper place in the word. But, if the letter does not belong in the word, the computer will buzz, the screen will temporarily go black, the letter will appear on the bottom of the screen, and a piece of the Element Man will appear. If you guess 11 incorrect letters, the Element Man is yours to keep.

A list of the chemical elements appears below. Familiarize yourself with the names, but try not to use the list when you're playing "Element Man."

actinium	berkelium	carbon	dysprosium
aluminum	beryllium	cerium	einsteinium
americium	bismuth	cesium	erbium
antimony	boron	chlorine	europium
argon	bromine	chromium	fermium
arsenic	cadmium	cobalt	fluorine
astatine	calcium	copper	francium
barium	californium	curium	gadolinium

Level

4

gallium	manganese	potassium	tantalum
germanium	mendelevium	praseodymium	technetium
gold	mercury	promethium	tellurium
hafnium	molybdenum	protactinium	terbium
helium	neodymium	radium	thallium
holmium	neon	radon	thorium
hydrogen	neptunium	rhodium	thulium
indium	nickel	rhodium	tin
iodine	niobium	rubidium	titanium
iridium	nitrogen	ruthenium	tungsten
iron	nobelium	samarium	uranium
krypton	osmium	scandium	vanadium
lanthanum	oxygen	selenium	xenon
lawrencium	palladium	silicon	ytterbium
lead	phosphorus	silver	yttrium
lithium	platinum	sodium	zinc
lutetium	plutonium	strontium	zirconium
magnesium	polonium	sulfur	

Scoring

No point score is given in Element Man. At the end of each round, the computer will ask if you want to try another element. Type Y for Yes or N for No. If you indicate you do not want to play again, the computer will tell you how many elements were guessed correctly and how many you missed since you began playing this session of Element Man.

Element Man

Remember, do not type the checksum number at the end of each line. For example, do not type ":rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

Four by Four

Skill area: Memory and Logic

Level: 4

Equipment required: None

Modification: Yes

The Race

You're dreaming again, and anything can happen in a dream. This time you're the smartest person on earth, and you're on television to match wits with a computer. In your dream, you need to know something about every subject imaginable. You also must be able to come up with your answers quickly. You can't hope to beat a computer unless you're fast.

How to Play

The computer will select four categories and four letters of the alphabet. In each category you then enter a word that begins with the letter the computer has picked. An asterisk (*) indicates you can use any letter to begin a word. For example, the computer has chosen the letters A, *, K, and W, and the first category is mammals. For the letter A, you select aardvark. The * is a wild card, so you can type in the name of any animal. At first you can't think of an animal whose name begins with a K, so you skip K for now by pressing the RETURN key. (The computer will return to this question later.) For the W, you type wombat. Then the next category appears.

After you've gone through all four categories, the unanswered questions will appear again. The categories will repeat until one of three things happens:

- You've answered all the questions.
- Your four-minute time limit is up.
- You type QUIT instead of entering an answer.

Good spelling is not essential for playing "Four by Four." As long as you enter a word beginning with the correct letter, the computer will consider the answer correct. This puts the responsibility on you to answer the questions honestly. You could cheat, but that is not the object of the game.

When a category asks for people's names, type the person's

last name. For example, when asked for the name of a United States president, you can't put Zachary Taylor's name in the Z column. If you draw Z in the U.S. Presidents category, you'll have to leave that space blank because there are no presidents whose surnames begin with the letter Z.

Scoring

After you've answered all the questions, run out of time, or quit the round, your score will appear. The score is based on the number of correct answers you entered (*correct* means the answer began with the right letter), along with the time it took you to finish the round.

The computer will also give the high score on all rounds of Four by Four you've played in this session. You may only be playing against a computer in your dream, but in reality you can play against yourself or against another person. If you're playing Four by Four with a friend, you can play a round and then tell the computer to give your friend the same categories and letters. Then you'll see who's the quickest to come up with answers.

Four by Four

Remember, do not type the checksum number at the end of each line. For example, do not type ":rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

Heavenly Bodies

Skill area: Science
Level: 4
Equipment required: None
Modification: Yes

Exploring the Solar System

"Heavenly Bodies" is a question-and-answer game designed to teach the planets of the solar system. Points are given if you correctly identify a planet from a clue given.

How to Play

The game consists of 100 questions, each of which pertains to one of the nine known planets or the Planet X of astronomical theory. You indicate your answer by entering the first letter of the planet. If you enter an incorrect answer, the correct answer will flash on the computer screen before play resumes.

You can quit playing at any time by pressing the f1 key. Your percentage score will not be affected if you quit before all 100 questions have been asked.

Scoring

You will receive ten points for each correct answer, and one point will be deducted for each incorrect response. A score, based on the number of questions asked and the number of questions answered correctly, will be shown at the end of the game. You will be given both a numerical score and your percentage score.

Heavenly Bodies

Remember, do not type the checksum number at the end of each line. For example, do not type ".:rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

Mother Earth

Skill area: Social Studies

Level: 4

Equipment required: None

Modification: Yes

Exploring the World

"Mother Earth" is actually two games — one a question-and-answer game concerning the world's major countries, and the other a similar game concerning countries that are not as prominent in world affairs. More than 120 countries are represented in Mother Earth, but geography buffs will note that other smaller countries (many of them possessions of Great Britain) are not mentioned in the game. If you want to include other countries, you should refer to the Programmer's Notes.

Typing Mother Earth

Mother Earth has been divided into three separate programs. All three programs can be merged to make one very large program and will function as one program with all the countries. The second option for entering it is to create two separate programs.

To create two separate programs, first type in and SAVE Program 1, the Main Listing. The Main Listing will be used with both sets of data programs. Once Program 1 has been SAVED to disk or tape, LOAD it back into memory. Then type in Program 2 and SAVE the whole program (Programs 1 and 2) to disk or tape. If all goes well you will have a complete working version of Mother Earth which includes only the countries listed in group 1.

To create the second version of Mother Earth, containing the information about the other group, simply reLOAD Program 1 and add to it Program 3. Once you have Program 1 and Program 3 together in memory, SAVE it to disk or tape.

How to Play

After loading Mother Earth 1 or Mother Earth 2 into the computer, you'll be asked to choose the area of the world you wish to cover. These include:

- A Europe
- B North Africa and the Middle East

Level

4

- C Africa
- D Asia and the Pacific
- E Western Hemisphere

Questions will be asked about the countries in the area you choose. Points are given depending on how fast you identify a country from the clues given.

You'll be asked up to five questions about each country. Identify the country by typing in the name. Because these names must be spelled correctly for the computer to count the answers correct, the spellings appear alphabetically, by game, below:

Mother Earth 1

Afghanistan	Germany	Lebanon	Spain
Argentina	Ghana	Liberia	Sudan
Australia	Great Britain	Libya	Sweden
Austria	Greece	Mexico	Switzerland
Brazil	India	Namibia	Syria
Cambodia	Iran	Norway	Taiwan
Canada	Iraq	Pakistan	Turkey
Chile	Ireland	Panama	Uganda
China	Israel	Paraguay	United States
Cuba	Italy	Peru	Uruguay
Denmark	Ivory Coast	Saudi Arabia	USSR
Egypt	Japan	Scotland	Venezuela
Ethiopia	Jordan	Senegal	Vietnam
Finland	Kenya	South Africa	Zimbabwe
France	Korea		

Mother Earth 2

Albania	Congo	Honduras
Algeria	Costa Rica	Hungary
Angola	Cyprus	Iceland
Bahamas	Czechoslovakia	Indonesia
Bangladesh	Dominican Republic	Jamaica
Belgium	Ecuador	Kuwait
Benin	El Salvador	Lesotho
Bolivia	Gabon	Luxembourg
Botswana	The Gambia	Madagascar
Bulgaria	Guatemala	Mauritania
Burma	The Guianas	Morocco
Cameroon	Guinea	Mozambique
Colombia	Haiti	The Netherlands

New Zealand	Rumania	Tunisia
Nicaragua	Sierra Leone	U. Arab Emirates
Oman	Somalia	Yemen
Philippines	South Yemen	Yugoslavia
Poland	Sri Lanka	Zaire
Portugal	Tanzania	Zambia
Puerto Rico	Thailand	
Qatar	Togo	

The countries represented in Mother Earth 1 and Mother Earth 2 are divided according to the relative importance of the country *in the geographical section of the world where it is located*. You may argue that Guatemala or Poland isn't in the same class as Togo or South Yemen, but the former countries occupy the same relative status in the Western Hemisphere and Europe as the latter countries do in Africa and the Middle East.

If a question is asked that you don't know the answer to, you should make a guess or press the RETURN key. Up to five questions will be asked randomly about each country; one of the five questions will always be the country's capital or capitals. The last question will always be a multiple-choice question.

You can quit playing at any time by typing END and pressing RETURN. Your percentage score will not be affected if you quit before all questions have been asked.

Scoring

Points will be awarded as follows:

If the question is answered after 1 clue, 5 points.

If the question is answered after 2 clues, 4 points.

If the question is answered after 3 clues, 3 points.

If the question is answered after 4 clues, 2 points.

If the question is answered after 5 clues, 1 point.

If the computer has to answer the question for you, -5 points.

At the end of the game, a numerical score will be shown. A percentage score will also be given to let you know the grade you earned. You will then be asked if you want to play again.

Program 1. Mother Earth - Main Listing

Remember, do not type the checksum number at the end of each line. For example, do not type ":rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

Mr. President

Skill area: Social Studies
Level: 4
Equipment required: None
Modification: Yes

“Mr. President” is designed to teach facts about the United States presidents. You are given clues and then asked to identify the president from the clues. Points are given depending on how many clues you need to identify a president.

How to Play

You will be given up to four questions that can be answered with the name of a particular president. To begin the game, hit any key and wait ten seconds for the computer to organize the questions.

When a question is asked by the computer, answer it by typing the name of the president as it appears below. The computer will count any misspelling as an incorrect answer, so make sure to enter the names exactly. If you don't know the answer to a clue, take a guess, or press the RETURN key.

Here are the United States presidents whose names you'll be using:

J Adams	J Garfield	L Johnson	F Roosevelt
Q Adams	U Grant	J Kennedy	T Roosevelt
C Arthur	W Harding	A Lincoln	W Taft
J Buchanan	B Harrison	J Madison	Z Taylor
J Carter	W Harrison	W McKinley	H Truman
G Cleveland	R Hayes	J Monroe	J Tyler
C Coolidge	H Hoover	R Nixon	M Van Buren
D Eisenhower	A Jackson	F Pierce	G Washington
M Fillmore	T Jefferson	J Polk	W Wilson
G Ford	A Johnson	R Reagan	

You'll notice a few things about this list. First, the men are listed by first initial rather than first name. Second, there is no period after the initial as it is written for the computer. Third, because there are two presidents with the name J Adams, John Adams and John Quincy Adams, the two presidents have been distinguished by referring to the latter as Q Adams. Pay close attention to these rules. If you know the answer to a question is

Level

4

Abraham Lincoln and you enter the words Abraham Lincoln or even A. Lincoln, the computer will count your answer incorrect.

If you still haven't discovered the name of a president after four questions, the name will appear on the screen. A second or two after the name flashes, the game continues.

You can quit playing at any time by entering END on the keyboard. Your percentage score will not be affected if you quit before all questions have been asked.

Scoring

Points will be awarded as follows:

If you guess correctly after only 1 clue, 4 points.

If you guess correctly after 2 clues, 3 points.

If you guess correctly after 3 clues, 2 points.

If you guess correctly after 4 clues, 1 point.

If the computer has to show you the correct answer, -5 points.

Your score is shown at the end of the game. You will also see a percentage score.

Mr. President

Remember, do not type the checksum number at the end of each line. For example, do not type "rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

Movers and Shakers

Skill area: Social Studies

Level: 4

Equipment required: None

Modification: Yes

People of the Past

"Movers and Shakers" is a question-and-answer game designed to acquaint you with the heroes and villains of world history. You will be asked up to three questions about selected men and women of history. Points are determined by the number of questions you need to identify a particular character.

How to Play

This game is divided into eight categories:

- A. World Leaders
- B. Artists and Thinkers
- C. Famous Women
- D. American Heroes
- E. Villains and Outlaws
- F. Scientists
- G. Religious Leaders
- H. Random Selections

There are 63 historical characters, but they may appear in more than one category. For example, Adolph Hitler would appear in Category A, but he would also appear in Category E. All characters are included in Category H.

To choose a category, type the letter of the category you wish to play. Wait ten seconds for the data to load and the game to begin.

You will be asked three questions about each character. Since the computer will count misspellings as incorrect answers, here are the correctly spelled names of the characters:

Level
4

Alexander the Great
Ethan Allen
Thomas Aquinas
Attila the Hun
Aristotle
Benedict Arnold
Clara Barton
Ludwig van Beethoven
Alexander Graham Bell
Napoleon Bonaparte
John Wilkes Booth
Johannes Brahms
Caligula
John Calvin
George Washington Carver
Catherine II
Frederic Chopin
Cleopatra
Marie Curie
Benjamin Disraeli
Mary Baker Eddy
Thomas Edison
Albert Einstein
Enrico Fermi
Henry Ford
Benjamin Franklin
Sigmund Freud
Mohandas Gandhi
Paul Gauguin
Johann von Goethe
Alexander Hamilton
King Henry VIII

Adolph Hitler
Edward Jenner
John Paul Jones
Carl Jung
Martin Luther King
Robert E. Lee
Nikolai Lenin
Louis XIV
Martin Luther
Guglielmo Marconi
Karl Marx
Wolfgang Mozart
Benito Mussolini
Sir Issac Newton
Friedrich Nietzsche
Florence Nightingale
Louis Pasteur
Eva Peron
Pablo Picasso
Plato
Grigori Rasputin
Rembrandt van Rijn
Peter Paul Rubens
Socrates
Petr Tchaikovsky
Mao Tse-Tung
Vincent van Gogh
Pancho Villa
Booker T. Washington
Duke of Wellington
Brigham Young

You can quit playing anytime by entering END as an answer. Your percentage score will not be affected if you quit before all questions have been asked.

Scoring

Points are awarded as follows:

- 3 points if the correct answer is given after 1 clue.
- 2 points if the correct answer is given after 2 clues.
- 1 point if the correct answer is given after 3 clues.

Level

4

If all questions are missed, 3 points will be deducted from the score.

At the end of the game, you'll be shown your total number of points, as well as your percentage score.

Movers and Shakers

Remember, do not type the checksum number at the end of each line. For example, do not type ":rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

Skeleton

Skill area: Science

Level: 4

Equipment required: None

Modification: Yes

That Old Bag of Bones

You've heard people say their family has a "skeleton in the closet." Usually they mean Aunt Mildred is a bit peculiar, or Uncle Fred has a very strange hobby. But there's another way to get a skeleton in your closet: lose this game, and you'll have a skeleton sitting right on your closet floor.

Do you want a skeleton in your closet? Of course not! But if you know your bones, you won't have any problem with this knock-kneed character.

How to Play

"Skeleton" is designed to teach you parts of the basic skeletal structure. The computer will pick a name of a bone which you must guess. The computer will also give you a clue.

Determine the bone by trying one letter at a time. If you pick more than 11 incorrect letters, you'll find a skeleton sitting in your closet.

Hit any key to begin. Then pick your level of play and wait ten seconds. The computer will ask you to enter a letter. If it's a letter that's found in the word the computer has in mind, the computer will show you that letter's position in the word. If you guess incorrectly, the screen will go black, the incorrect letter you've tried will appear at the bottom of the screen, and part of the skeleton will appear in your closet.

The names included in Skeleton appear below. Familiarize yourself with the list, but try not to use it during play. You may find it easier if you use the list, but you won't have as much fun.

Beginning List

Clavicle
Humerus
Ulna
Radius
Tibia

Fibula
Femur
Metatarsal Bones
Tarsal Bones
Patella

Carpal Bones
Metacarpal Bones
Phalanges
Coccyx
Ilium

Level

Sacrum

Vertebrae
Ribs
Sternum

Scapula
Mandible
Cranium

Advanced List

Parietal Bone
Sphenoid
Temporal Bone
Occipital Bone
Mastoid Process
Pubic Symphysis
Lumbar Vertebrae
Thoracic Vertebrae
Cervical Vertebrae

Maxilla
Zygomatic Bone
Nasal Bone
Frontal Bone
Sacroiliac Joint
Axis
Atlas
Axis
Atlas

Scoring

At the end of a round, the computer will ask if you want the name of another bone. Press the letter Y for yes or the letter N for no. After you've finished playing Skeleton, the computer will tell you how many words you correctly identified, as well as how many you missed.

Skeleton

Remember, do not type the checksum number at the end of each line. For example, do not type ":rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

Unicorn

Skill area: Social Studies

Level: 4

Equipment required: None

Modification: Yes

Mythology

"Unicorn" is a history game of people who never were. The 37 characters whose lives are presented here lived only in the minds of the ancient Greeks and Romans. These are the heroes and heroines of Greek and Roman mythology.

You'll be asked up to 5 questions about each of 37 Greek and Roman mythological heroes. The questions will be presented in random order, so every game of Unicorn is different. Points are given depending on how many questions you use to identify the hero or heroine in question.

How to Play

To begin the game, hit any key. Because of the amount of data in Unicorn, there will be a ten-second delay after the key is pressed before the game begins.

When a question is asked by the computer, type the name of the mythological hero or heroine on the keyboard. If you can't guess the name of the character from the clue provided, hit the RETURN key.

Abbreviations and misspellings are incorrect answers, so you must write out the full name of the character. Many of these characters have both Greek and Roman names. For example, the Greek god Hermes is identical to the Roman god known as Mercury. Unless otherwise specified, Unicorn uses the Greek name, and the Roman name is considered an incorrect answer.

If you are unable to guess the hero or heroine's name after the first four questions have been presented, the fifth is a multiple-choice question. The correct name will then flash on the screen if you still can't identify the character.

Anytime you wish to end the game early, type END instead of making a guess on any question. You will not be penalized if you end the game before all questions have been asked.

The names of the 37 mythological characters depicted in Unicorn are listed below as a spelling aid:

Achilles	Daedalus	Mars	Persephone
Aeneas	Dionysus	Medea	Perseus
Agamemnon	Echo	Medusa	Phaeton
Andromeda	Hades	Narcissus	Poseidon
Aphrodite	Hecate	Odysseus	Prometheus
Apollo	Helen	Oedipus	Sisyphus
Artemis	Heracles	Orpheus	Tantalus
Athena	Hermes	Pandora	Theseus
Cassandra	Jason	Pelops	Zeus
Circe			

Scoring

Points are given in Unicorn as follows:

If you get the right name after only 1 question, 5 points.

If you guess after 2 questions, 4 points.

If you guess after 3 questions, 3 points.

If you guess after 4 questions, 2 points.

If you guess after 5 questions, 1 point.

If you are still unable to guess the name of the mythological character, -5 points.

At the end of the game, you will see the total number of points, as well as a percentage score.

Unicorn

Remember, do not type the checksum number at the end of each line. For example, do not type ":rem 123" Please read the article about the "Automatic Proofreader" in Appendix E.

Homework's Done**

Asteroid Blast

Skill area: Coordination

Level: 2, 3, 4

Equipment required: Joystick handy, but not essential

Modification: No

Asteroid Cluster

You are commander of Space Station Omega, but your command and life are in jeopardy. A cluster of asteroids is on the way. As the asteroids surround the space station, the future of hundreds of people is in your hands.

How to Play

The computer will fire missiles from the left edge of the screen. You can cause each missile to climb or dive by using the joystick or the keyboard. If you use the keyboard, press W or f5 to cause the missiles to climb; press X or f7 to cause the missiles to dive. The object of the game is to clear all the asteroids with the missiles, saving your space station from destruction. Be careful not to hit your space station with a missile.

Control your game by choosing three options:

- A. The number of asteroids in the asteroid cluster;
- B. The speed of your missiles;
- C. The number of warheads each missile can fire.

The computer will ask how many asteroids you want. Type a number from 10 to 200 and press the RETURN key. Next, you'll be asked how fast you want the missiles to go; press a number from 1 to 9, followed by the RETURN key, to indicate missile speed — 1 is the fastest, and 9 is the slowest missile speed. Third, you'll be asked how many shots you want each missile to be capable of firing. Press 1, 2, 3, 4, or 5, and then the RETURN key.

The computer fires each missile, one by one. You control each missile's path by moving it up or down to hit the asteroids and avoid the space station.

Scoring

At the end of a game, the computer will tell you how many asteroids you destroyed, together with how many missiles it took. You will then be given a rank, ranging from private all the way to

Just For Fun

4-star general. To increase your rank, you may want to choose a higher number of asteroids, a faster missile speed, and only one or two warheads per missile.

Asteroid Blast

Remember, do not type the checksum number at the end of each line. For example, do not type "rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

Black Hole

Skill area: Coordination

Level: 2, 3, 4

Equipment required: Joystick handy, but not essential

Modification: No

Space Fleet

You are a star fleet captain, and you're in a tight spot. Your ships must get to Espilon Eridani, but between the fleet and the star is a series of black holes. Any ship that enters a black hole is lost forever. Your assignment is to get as many ships as possible through the field of black holes and reach Espilon Eridani on schedule.

How to Play

Each ship, launched by the computer, travels from left to right. Manipulate your ship around the black holes towards the right edge of the screen, using the joystick or the keyboard. When using the keyboard, pressing W or f5 causes your ship to climb; pressing X or f7 causes it to dive.

You can control the game by choosing three options:

- A. The number of starships in your fleet;
- B. The speed your starships will travel;
- C. The number of black holes that will block your path.

The computer first asks how many starships you want. Type any number from 10 to 50 and then press the RETURN key. Next, you'll be asked how fast you want your ships to travel. Type any number from 1 (the fastest speed) to 9 (the slowest speed), and hit RETURN. Third, indicate how many black holes you want. Type any number from 50 to 200 and then press RETURN.

If you wish to speed past the introductory screens, just hold down the Commodore key when the program first starts running.

Scoring

Your score is based on the number of starships in your fleet, as well as the number that successfully navigate the field of black holes. You will also receive points for unsuccessful trips based on how far you did travel. You will be awarded a rank from private to 4-star general, depending on your navigational prowess. To increase your chances of a high ranking, you may want to choose a

Just For Fun

larger number of starships, a fast starship speed, and a large number of black holes.

Black Hole

Remember, do not type the checksum number at the end of each line. For example, do not type "rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

Earthworms

Skill area: Coordination

Level: 3, 4

Equipment required: Joystick

Modification: Yes

The Algae Pit

You are an earthworm, and you love eating algae. The best algae in the world are found in the algae pit. Unfortunately for you, the algae pit is owned by a person who doesn't like earthworms. In order to protect his precious supply of algae from you, he has sprinkled the pit with pebbles and encircled it with an electric fence. You got inside the fence during a power outage, but now that the power is on, you don't want to touch the fence. Running into a pebble will cause you indigestion. Finally, you are so hungry for algae that you must eat algae with every move you make, or you won't be able to go on. This means you won't be able to backtrack over territory you've covered before. It isn't an easy task, but it's your life.

How to Play

You can choose one of five skill levels. Level 1 is the easiest. When the computer asks which skill level you prefer, type the number you want and wait, joystick in hand, for the game to start.

As soon as "Earthworms" begins, the earthworm will begin moving on its own. You must control the movement to eat algae balls or avoid the pebbles with the joystick. Be careful not to run into the fence around the border, or the game is over. Before using the joystick, wait to see which way the earthworm is moving. If you backtrack over a path you've already made, the game is over.

Scoring

Scoring is simple. You are awarded 10 points for each algae ball eaten. Because hitting pebbles, running into the fence, or backtracking over your trail ends the game, no points are deducted for those moves.

Just For Fun

Earthworms

Remember, do not type the checksum number at the end of each line. For example, do not type "rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

Ladybug

Skill area: Coordination

Level: 2, 3, 4

Equipment required: None

Modification: No

Life in the Compost Heap

You're a ladybug, and always hungry. The best food in town is in Mrs. Woodstock's compost heap. It's just full of wonderful, juicy, rotting tomato leaves. It's your joy in life to run around the wire fence that holds all that tasty food. Whenever you see a particularly ripe tomato leaf, you jump for it.

But Mrs. Woodstock broke a mirror last week; not thinking, she threw the pieces in the compost heap. Now she's forgotten about the mirror, but those mirror pieces mean seven years of bad luck for you. Now, quite often when you see what looks like a nutritious tomato leaf, you'll jump for it and end up bouncing all over that compost heap. What you thought was a leaf turns out to be just a reflection in a piece of the mirror. Even if you could eat it, it wouldn't taste good.

How to Play

You run around the compost heap waiting for your lunch. You signal lunchtime by pressing the space bar. Eat as many leaves as you can in as few lunchtimes as possible.

There are ten skill levels in "Ladybug," ranging from 0 (easy) to 9 (hard). Press the number of the skill level you want and wait for the game to begin. Whenever you see a good cluster of leaves, press the space bar. If you hit a mirror fragment, you may bounce out of the compost heap. If you're lucky, the mirror fragment will bounce you into another tomato leaf or two along the way.

Keep eating leaves until there aren't any left. If a leaf seems impossible to reach, you can either press SHIFT to increase the number of mirror fragments or you can end the game by pressing f1.

Scoring

At the end of a game, the computer will tell you four things:

How many leaves were in the compost heap;

Just For Fun

How many leaves you ate;
How many lunchtimes it took you to eat the leaves; and
What is your numerical score.

Numerical scores are issued by the computer on the basis of how efficiently you attacked the compost heap. The low score is 0, and if you're good you can probably get scores of a hundred or more.

Ladybug

Remember, do not type the checksum number at the end of each line. For example, do not type " :rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

Build a Quiz

Build a Quiz

Skill area: Any Category

Level: 2, 3, 4

Equipment required: None

Modification: Yes

Build a Quiz

This book contains many programs that will teach your kids a wide assortment of things as they play games. However, no two kids are alike, and even one child's needs change from day to day. "Build a Quiz" will help you keep on top of those needs.

Build a Quiz comes with two options. You can build a quiz on any subject and write it out to tape or disk, or you can give your child (or yourself) a test on any subject for which you've previously written a quiz.

If your child isn't doing well in civics, say, and there's a big test coming up, you can make up a sample test from the child's textbook or class notes. Because this is your test, you can make it as general or specific as you wish. You can use Build a Quiz to create a test about the United States Constitution or about the history of your local government. Whatever your child needs can be covered with Build a Quiz, and you can create tests using multiple-choice, true-false, or completion questions, or a combination of the three.

Build a Quiz has another function, too — fun. Maybe your teen-age son has told you he'll pass your quiz on geometry if you pass a quiz he makes up about rock stars. Both tests can be constructed with this program.

Who knows? Now that you have Build a Quiz, maybe the whole family will learn something about a variety of unusual subjects.

Build a Quiz

Remember, do not type the checksum number at the end of each line. For example, do not type ":rem 123." Please read the article about the "Automatic Proofreader" in Appendix E.

A Beginner's
Guide to
Typing In Programs**

A Beginner's Guide to Typing In Programs

What Is a Program?

A computer cannot perform any task by itself. Like a car without gas, a computer has *potential*, but without a program, it isn't going anywhere. Most of the programs published in this book are written in a computer language called BASIC. BASIC is easy to learn and is built into all Commodore 64s.

BASIC Programs

Computers can be picky. Unlike the English language, which is full of ambiguities, BASIC usually has only one right way of stating something. Every letter, character, or number is significant. A common mistake is substituting a letter such as O for the numeral 0, a lowercase l for the numeral 1, or an uppercase B for the numeral 8. Also, you must enter all punctuation such as colons and commas just as they appear in the book. Spacing can be important. To be safe, type in the listings *exactly* as they appear.

Braces and Special Characters

The exception to this typing rule is when you see the braces, such as {DOWN}. Anything within a set of braces is a special character or characters that cannot easily be listed on a printer. When you come across such a special statement, refer to "How to Type In Programs."

About DATA Statements

Some programs contain a section or sections of DATA statements. These lines provide information needed by the program. Some DATA statements contain actual programs (called machine language); others contain graphics codes. These lines are especially sensitive to errors.

If a single number in any one DATA statement is mistyped, your machine could lock up, or crash. The keyboard and STOP key may seem dead, and the screen may go blank. Don't panic — no damage is done. To regain control, you have to turn off your computer, then turn it back on. This will erase whatever program

Appendix

A

was in memory, so *always SAVE a copy of your program before you RUN it*. If your computer crashes, you can **LOAD** the program and look for your mistake.

Sometimes a mistyped **DATA** statement will cause an error message when the program is **RUN**. The error message may refer to the program line that **READs** the data. *The error is still in the DATA statements, though.*

Get to Know Your Machine

You should familiarize yourself with your computer before attempting to type in a program. Learn the statements you use to store and retrieve programs from tape or disk. You'll want to save a copy of your program, so that you won't have to type it in every time you want to use it. Learn to use your machine's editing functions. How do you change a line if you made a mistake? You can always retype the line, but you at least need to know how to backspace. Do you know how to enter reverse video, lowercase, and control characters? It's all explained in your computer's manuals.

A Quick Review

- 1) Type in the program a line at a time, in order. Press **RETURN** at the end of each line. Use backspace or the back arrow to correct mistakes.
- 2) Check the line you've typed against the line in the book. You can check the entire program again if you get an error when you **RUN** the program.

**Appendix B:
How to
Type In Programs**

How to Type In Programs

To make it easy to know exactly what to type when entering one of these programs into your computer, we have established the following listing conventions.

Generally, Commodore 64 program listings will contain words within braces which spell out any special characters: {DOWN} would mean to press the cursor down key. {5 SPACES} would mean to press the space bar five times.

To indicate that a key should be *shifted* (hold down the SHIFT key while pressing the other key), the key would be underlined in our listings. For example, S would mean to type the S key while holding the shift key. This would appear on your screen as a heart symbol. If you find an underlined key enclosed in braces (e.g., {10 N}), you should type the key as many times as indicated (in our example, you would enter ten shifted N's).

If a key is enclosed in special brackets, [`<` `>`], you should hold down the *Commodore key* while pressing the key inside the special brackets. (The Commodore key is the key in the lower left corner of the keyboard.) Again, if the key is preceded by a number, you should press the key as many times as necessary.

Rarely, you'll see a solitary letter of the alphabet enclosed in braces. These characters can be entered by holding down the CTRL key while typing the letter in the braces. For example, {A} would indicate that you should press CTRL-A.

About the *quote mode*: You know that you can move the cursor around the screen with the CRSR keys. Sometimes a programmer will want to move the cursor under program control. That's why you see all the {LEFT}'s, {HOME}'s, and {BLU}'s in our programs. The only way the computer can tell the difference between direct and programmed cursor control is the quote mode.

Once you press the quote (the double quote, SHIFT-2), you are in the quote mode. If you type something and then try to change it by moving the cursor left, you'll only get a bunch of reverse-video lines. These are the symbols for cursor left. The only editing key that isn't programmable is the DEL key; you can still use DEL to back up and edit the line. Once you type another quote, you are out of quote mode.

You also go into quote mode when you INSerT spaces into a line. In any case, the easiest way to get out of quote mode is to just

Appendix

B

press RETURN. You'll then be out of quote mode and you can cursor up to the mistyped line and fix it.

Use the following table when entering cursor and color control keys:

When You Read:	Press:	See:	When You Read:	Press:	See:
{ CLEAR }	SHIFT CLR/HOME		⌘ 1	COMMODORE 1	
{ HOME }	CLR/HOME		⌘ 2	COMMODORE 2	
{ UP }	SHIFT ↑ CRSR ↓		⌘ 3	COMMODORE 3	
{ DOWN }	↓ CRSR ↑		⌘ 4	COMMODORE 4

**Appendix D:
Programmer's
Notes**

Programmer's Notes

This appendix explains some of the changes you may wish to make to the games in this book. These changes are optional, but could be used to make the games more suitable to your needs.

Changes can be made either as you enter the program into the computer or after the program has been entered.

All of the changes accomplish one of two things:

1. Cause the program to accept input from the keyboard, rather than a joystick.
2. Revise the questions in a game after all the old questions and answers have been memorized.

Most of the games in this book read their data from DATA statements near the end of the program. For example, in the game "Spelling Bee," all of the words in the game are obtained from DATA statements. This allows the user to substitute a complete new set of words by changing only a few statements. If you're uncertain about the syntax of the DATA statement, please read Chapter 8 in the *Commodore 64 User's Guide* (the book that came with your Commodore 64). Note also that the values defined by DATA statements in this book sometimes have extra spaces in them. This may appear strange in print, but it is designed so that the data will print correctly on the Commodore 64 and not wrap around the screen.

The modifications in this appendix that convert a joystick game to use the keyboard assume that the following keys will be used:

W = UP
Z = DOWN
A = LEFT
S = RIGHT

A-Maze-Ing

If you wish to change the two-minute time limit, change the "000200" value (HHMMSS) in line 8000.

The subroutine starting at line 9000 builds the maze. This is a modification of the "Maze Generator" (*COMPUTE!'s First Book of Commodore 64 Games*).

Appendix

D

Replace the following lines to adapt the game for a keyboard rather than a joystick:

```
8005 J1=PEEK(197):IF J1=9 THEN R2=R2-1      :rem 40
8010 IF J1=33 THEN R2=R2+1                  :rem 70
8020 IF J1=17 THEN C2=C2-1                  :rem 45
8030 IF J1=41 THEN C2=C2+1                  :rem 41
```

Build a Quiz

The program is written to write/read quiz data to/from either disk or tape. The program assumes device number 1 for tape and device number 8 for disk. If you wish to change these defaults, change the variables DI = 8 and TA = 1 in line 100.

Quiz files written by the program have a name of "QUIZ/" followed by the first 11 characters of the quiz name. Be careful not to create files with duplicate names. You may change this name structure by changing the subroutine starting at line 7500.

Earthworms

This game may be modified to use the keyboard instead of a joystick. Replace the following lines in the program:

```
2210 KP=PEEK(197)                          :rem 180
2220 IF KP=9 THEN V3=-1                      :rem 185
2230 IF KP=12 THEN V3=1                     :rem 183
2240 IF KP=10 THEN H3=-1                    :rem 213
2250 IF KP=13 THEN H3=1                     :rem 172
```

Element Man

The number of chemical elements is defined by the variable NW% = 103 in line 100. Change this number if you add or delete any elements.

The element names are defined with DATA statements in lines 10000 through 10200. Elements may be added or deleted from this list as desired. The maximum size of an element name is 20 characters.

Four by Four

Lines 9000 through 9130 define 35 different question categories used in the game. You may modify these as desired, but there *must* always be 35.

Line 9500 defines the letters of the alphabet that will be used in the game, plus any wild letters (shown as an asterisk). You may change these if you wish, but the number of letters *must* always be 28.

An answer will be ignored if the first letter entered does not match the letter requested by the program (except for wild letters). All names of people should be entered as "LAST, FIRST".

Get the Treasure

Ten different treasures are defined on line 10000. These numbers correspond with the screen codes defined in Appendix E of the *Commodore 64 User's Guide*. You may wish to change this so that the treasures are letters, numbers, etc., but there *must* always be ten treasures.

The six colors of the treasures are defined by line 10010. These correspond with the codes in Appendix G of the *Commodore 64 User's Guide*. You may change them if desired, but there *must* always be six.

This game is designed for young children who would have a hard time using the keyboard, but if you want to change the program to use the keyboard:

```
420 J2=J1:K2=K1:KP=PEEK(197)           :rem 99
425 IF KP=9 THEN J2=J2-1                :rem 253
430 IF KP=12 THEN J2=J2+1               :rem 33
440 IF KP=10 THEN K2=K2-1               :rem 36
450 IF KP=13 THEN K2=K2+1               :rem 38
```

Heavenly Bodies

One hundred different questions are defined starting with line 2000. If you add or delete any questions, you must change the variable NQ = 100 in line 100. Each question is composed of two different items:

1. The question itself, which must be contained in one DATA statement.
2. The answer to the question, expressed as a one-letter planet code (the same code a player uses when answering questions in this game).

Hidden Picture

Modify the program to use a keyboard instead of a joystick with the following lines:

```
8000 J1=PEEK(197)                       :rem 151
8010 IF J1=9 THEN C2=C2-1                :rem 253
8020 IF J1=12 THEN C2=C2+1               :rem 38
8030 IF J1=10 THEN R2=R2-1               :rem 69
8040 IF J1=13 THEN R2=R2+1               :rem 71
8050 IF J1=4 THEN JF=1                   :rem 117
8060 RETURN                               :rem 174
```

Appendix

D

The routine shown above will also allow you to select the next picture by pressing the f1 key instead of the fire button on the joystick.

Program lines 4900 through 7999 are reserved for defining extra pictures. Use the following procedure to do this:

1. Line 4000 generates a random number from 1 to 4 to determine which of the four pictures to draw. Change this to reflect the new number of pictures after you have added yours.
2. Line 4010 branches to a print routine, depending on the number picked in step 1. Add the line number of your new print routine(s) to this list. The first line number in the reserved area is line 4900.
3. Add a print routine starting at the line specified on statement 4010. Use PRINT statements to clear the screen (SHIFT/CLR) and then draw your picture.
4. When your picture is complete, branch (GOTO) statement 250.

Mother Earth

The data for the questions in these programs begin at line 3000 (Mother Earth-1) and 3190 (Mother Earth-2). You may add, delete, or change questions in this game, but there must always be at least 3 nations defined per category, and there cannot be more than 30 nations in any single category.

Each question is composed of six parts:

1. Category (a letter, A through E).
2. Clue 1.
3. Clue 2.
4. Clue 3.
5. Clue 4.
6. Answer (name of the nation).

The multiple-choice question is not entered in a DATA statement, but it is generated by the program.

Mr. President

The variable NP in line 100 defines the number of presidents, and the DATA statements in lines 1000 through 2490 provide the clues and answers. If you wish to add an entry, increase NP by 1 and add the new data after line 2490. The data for each president are defined as follows:

Appendix D

1. Clue 1.
2. Clue 2.
3. Clue 3.
4. Clue 4.
5. President's name.

Please note that the program prefixes each clue with a value of HE.

Even though the presidents are selected in a random order during the game, the clues for each president are always given in the same order. If you wish to change this to use random selection, make the following changes:

```
331 FOR W=0 TO 3                :rem 24
332 RT%(W)=0:NEXT W            :rem 72
333 FOR W=1 TO 4                :rem 28
334 Y=INT(RND(1)*4)           :rem 48
335 IF RT%(Y)<>0 THEN 334       :rem 18
336 RT%(Y)=W:NEXT W           :rem 117
420 PRINT CHR$(17);CHR$(17);"HE ";QT$(RT%(W)-1);".
    ";CHR$(17);CHR$(17)       :rem 155
```

Plan a Menu

The foods used in this game are defined starting with line 4000. There are six categories of foods, but more could be added. The categories must be in the correct order in the DATA statements, as they are presented in the same order during the game. Each category of items has the following structure:

1. The name of the food.
2. The number of calories per serving.

Items 3 through 10 are numbers which express the percentage of your daily nutritional requirements which this food supplies:

3. Protein.
4. Vitamin A.
5. Vitamin C.
6. Thiamin.
7. Riboflavin.
8. Niacin.
9. Calcium.
10. Iron.

Appendix

D

Movers and Shakers

The questions and answers used in this game are defined by DATA statements in lines 3000 through 5510. You may add new people to the game, as long as the number of people in any one category does not exceed 25. Also, the variable $NS = 63$ in line 100 must be adjusted to reflect the total number of people in the game.

The data for each person in the quiz are composed of five parts:

1. The category code(s) (A-G).
2. The person's name.
3. Clue 1.
4. Clue 2.
5. Clue 3.

The category code may reflect multiple categories if a person is famous in a number of areas (ACD). Notice that category H should not be specified, as it is done automatically by the program.

Skeleton

The number of bones in the program is defined by the variable $NW\% = 43$ in line 100. This should be adjusted if the number of bones is increased or decreased. The bones themselves are named in DATA statements in lines 7000 through 7090. Note that the name of a bone cannot exceed 20 characters.

Spelling Bee

The variable $NW\% = 40$ in line 100 defines the total number of words in each skill level (40 times 3, or 120 total). If you change the value of $NW\%$ you must also change the number of words in each skill level. The words are defined by DATA statements in the following line number ranges:

Beginning Words	6000 through 6999.
Intermediate Words	7000 through 7999.
Advanced Words	8000 through 8999.

Any new words should not be longer than 20 letters.

Spend Your Allowance

Lines 3100 through 3600 define 100 different items that may be purchased. Each item is composed of three parts:

1. The name of the item.

2. The cost of the item (500 = \$5.00).
3. The prudence factor (1-5). (1 = poor purchase, 5 = wise purchase).

The prudence factors for the 4 items purchased each month are added together and divided by 4. If the resulting answer (that is, the average prudence factor) is 4 or greater, and the current balance is not a negative number, the allowance will be increased by \$1. This is done by lines 905-910 of the program.

If the average prudence factor is less than 2, the allowance will be reduced by \$1, but only if the resulting monthly allowance is not less than \$5. This is done in lines 2000-2010 of the program.

Lines 4000 through 4300 contain 30 surprises which may occur during the game. Each surprise consists of three items:

1. Description of the surprise.
2. Amount to adjust cash on hand (500 = \$5.00).
3. Good or bad surprise (1 = Good; - 1 = Bad).

Stargazer

There are 32 constellations in the game, defined by the variable NS = 32 in line 100. The data for each constellation start in line 9100 and are composed of six parts per constellation:

1. Name of the constellation.
2. Name of best viewing month.
3. Direction in the sky.
4. Clue.
5. A variable set of numbers which defines each star in the constellation. These numbers are added to the address of screen memory to determine where a star should appear. (Refer to Appendix G in the *Commodore 64 User's Guide*.)
6. A numeric value of 0 to indicate the end of the stars.

State of the Union

The number of states is defined by the variable NS = 50 in line 100. The information about the states themselves is defined by DATA statements in lines 1000 through 2970. Each entry consists of four clues, followed by the name of the state, and a number representing the location of the state on the United States map. This number is added to the screen origin to determine where to place the black square on the map. (Refer to Appendix G in the *Commodore 64 User's Guide*.)

Appendix

D

Although the states are presented in a random order, the clues within a given state are always in the same order. To change this to a random selection, make the following changes:

```
331 FOR W=0 TO 3 :rem 24
332 RT%(W)=0:NEXT W :rem 72
333 FOR W=1 TO 4 :rem 28
334 Y=INT(RND(1)*4) :rem 48
335 IF RT%(Y)<>0 THEN 334 :rem 18
336 RT%(Y)=W:NEXT W :rem 117
420 PRINT CHR$(17);CHR$(17);CHR$(17):QT$(RT%(W)-1)
;". "; :rem 212
430 PRINT CHR$(17);CHR$(17);CHR$(17) :rem 200
```

Unicorn

The mythological characters are defined by lines 1000 through 3740, with the total number of characters being represented by the variable NS in line 100. Each character is represented by four clues, followed by a three-name multiple-choice list, and the number 1, 2, or 3 to indicate which of the three names is correct. For example, the following lines could be added to create a question about Heracles:

```
3750 DATA "CLUE 1"
3760 DATA "CLUE 2"
3770 DATA "CLUE 3"
3780 DATA "CLUE 4"
3790 DATA ZEUS,MARS,HERACLES,3
```

Wise Shopper

The number of ounces purchased of each item is calculated on lines 300 through 310. The price per ounce is calculated by lines 320 through 330.

The names of the 20 possible purchase items (only 10 are selected per game) are defined by DATA statements in lines 9100 through 9130. Each name has two parts ("corn," "flakes") but one-part names can be used by setting the second name to a blank ("rice," " "). Each word should not exceed six characters.

Users may modify any product name, but there should always be 20 products defined.

Word Scramble

The variable TS = 50 in line 100 defines the number of words in each skill level (50 times 3 = 150 total words). You may add, delete, or change words as desired, provided the number of words in

Appendix D

each skill level matches the value of TS.

Words are defined by DATA statements in the following lines:

9000-9040 BEGINNER'S WORDS

9100-9140 INTERMEDIATE WORDS

9200-9300 ADVANCED WORDS

Appendix E:
Automatic
Proofreader

The Automatic Proofreader

"The Automatic Proofreader" will help you type in program listings in this book without typing mistakes. It is a short error-checking program that hides itself in memory. When activated, it lets you know immediately after typing a line from a program listing if you have made a mistake. Please read these instructions carefully before typing any programs.

Preparing the Proofreader

1. Using the listing below, type in the Proofreader. Watch out for typing an I instead of a 1, or an O instead of a 0, extra commas, etc.
2. SAVE it on tape or disk at least twice *before running it for the first time*. If you mistype the Proofreader, it may cause a system crash when you first run it. By SAVEing a copy beforehand, you can reLOAD it and hunt for your error. Also, you'll want a backup copy of the Proofreader. Future COMPUTE! Books as well as COMPUTE!'s GAZETTE will use the Proofreader.
3. RUN the Proofreader. It will be POKEd into a relatively safe area of memory, the cassette buffer.
4. Type RUN to activate the Proofreader. If you ever need to reactivate it, just enter the command SYS 886 and press RETURN.

Using the Proofreader

All the listings in this book have a *checksum number* appended to the end of each line, for example *":rem 123"*. *Don't enter this statement when typing in a program*. It is just for your information. The rem makes the number harmless if someone does type it in. It will, however, use up memory if you enter it, and it will confuse the Proofreader, even if you entered the rest of the line correctly.

When you type a line from a program listing and press RETURN, the Proofreader displays a number at the top of your screen. *This checksum number must match the checksum number in the printed listing*. If it doesn't, it means you typed the line differently than the way it is listed. Immediately recheck your typing. Remember, don't type the rem statement with the checksum number; it is published only so you can check it against the number which appears on your screen.

Appendix

E

The Proofreader is not picky with spaces. It will not notice extra spaces or missing ones. This is for your convenience, since spacing is generally not important. But occasionally proper spacing *is* important, so be extra careful with spaces, since the Proofreader will catch practically everything else that can go wrong.

There's another thing to watch out for: if you enter the line by using abbreviations for commands, the checksum will not match up. But there is a way to make the Proofreader check it. After entering the line, LIST it. This eliminates the abbreviations. Then move the cursor up to the line and press RETURN. It should now match the checksum. You can check whole groups of lines this way.

When you're done with the Proofreader, disable it by pressing RUN/STOP-RESTORE (hold down the RUN/STOP key and press RESTORE). If you need it again, enter SYS 886. It will then be ready once again to act as your personal typing aid. However, sometimes the Proofreader can be wiped out of memory. In this case, you'll have to reLOAD the Proofreader from tape or disk.

Automatic Proofreader

Learning Through Games

Whether you're just starting or you already know how to program, you've probably realized that creating educational, entertaining games takes time and practice. This book, with 30 complete games, gives you an instant library of educational software for your children.

- *Hidden Picture*, in which your child uncovers a series of drawings on the screen using a joystick
- *Notecrafter*, which matches your musical ear against the computer
- *Stargazer*, in which you identify constellations displayed as you'd see them in the night sky
- *Real People*, which tests your knowledge of historical figures
- A program which allows you to create a quiz on any subject
- And games that teach skills from spelling to world geography

Each game is ready to type in and run on your Commodore 64, with clear explanations. You can even change the games to fit your child's needs.

And since the games are fun to play, your child will return to them again and again, learning something new each time.
